# REPORT

TO

HIS EXCELLENCY GEORGE HENRY, EARL CADOGAN, K.G.,  
 &c., &c., &c.

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCE,—

I have the honour to submit, for your Excellency's consideration, the Thirty-sixth Annual Report on Marriages, Births, and Deaths in Ireland.

## GENERAL SUMMARY.

The Marriages registered in Ireland during the year 1899 number 22,811; the Births, 103,900; and the Deaths, 79,699. The marriage-rate (4·92 per 1,000 of the estimated population) shows a slight decline as compared with that for the preceding year but is somewhat above the average rate for the ten years 1889-98; the birth-rate (22·9 per 1,000) is 0·3 under that for the preceding year, and 0·1 under the average rate for the ten years 1889-98; while the death-rate (17·6 per 1,000) is 0·5 below both the rate for the preceding year and the average rate for the ten years 1889-98.

The recorded natural increase of population, or excess of births over deaths, was 24,201: the loss by emigration amounted to 41,232; there would thus appear to have been a decrease of 17,031 in the population during the year, but against this decrease there is a set-off in immigration, of which no official record has been obtained. The estimated population in the middle of the year was 4,581,185.

**Table I.**—Showing for each of the years 1889-98, the estimated Population; the number of Marriages, Births and Deaths registered, and the number of Emigrants enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years 1889-98.

Years.	Estimated Population in the middle of each year.	Number Registered			Number of Emigrants as returned by the Commissioners	Rate per 1,000 of Estimated Population.

I have constructed the Diagram opposite (No. 1), which exhibits for each of the twenty years 1889-1899, the rate per 1,000 of the population represented by Marriages, Births, and Deaths, respectively, in Ireland.

\* See page 162.

These are 2,686 Local Registration Officers holding office directly under the Department or who have entered into bonds with the Registrar-General for the due discharge of their duties. During the year 1899, 846 cases of vacancies or appointments were dealt with.

I append a table showing the number of Searches made, and Certificates issued at the General Register Office; also the amount received as fees for same, in each year, since the commencement of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864.

TABLE II.—NUMBER OF SEARCHES made; number of CERTIFICATES issued, and Amount received as FEES for SEARCHES, &c., at the GENERAL REGISTER OFFICE, DUBLIN, during the 36 years 1864-99.

1898,	748	393	111 2 9	1899,	4,125	5,391	619 12 8

During the financial year ended 31st March last, 729 cases were reported of offences against the Acts administered by this Department. On careful inquiry into the circumstances, in 129 cases prosecutions were ordered to be instituted against the offenders. In 64 of these the parties were convicted and punished; in 56 the proceedings were abandoned, the parties (in most instances) paying the costs of court and complying with the law; and in 2 cases the summonses were dismissed; 7 cases were pending at the close of the year.

The cases dealt with included the following offences—Neglect to register Births; neglect to register Deaths; neglect to furnish Certificate of Marriage; failure of Coroner to furnish Certificate of Inquest; giving false information as to age at death, as to cause of death, and as to duration of illness; giving false information as to Births, viz.—registering illegitimate children as legitimate, and misrepresenting date of birth; neglect to give notice of non-delivery of Registrar's Certificate, or Coroner's Order for burial.

A sum of £130 was provided in the estimate to meet legal charges. The total cost of the legal service of the Department during the year was £88 2s. 6d., of which sum £67 12s. was paid for local professional assistance, and £9 3s. for mileage to the Registrars.

### MARRIAGES.

The number of Marriages registered during the year is 22,311, being equal to 4.92 per 1,000 of the estimated population,\* a rate which is 0.05 below that for the previous year, but 0.15 above the average for the ten years 1889-98.

Of the 22,311 Marriages registered during last year, 16,256 were between Roman Catholics; 3,665 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,408 were in Presbyterian Meeting-houses; 587 in "Registered Buildings" belonging to various religious denominations; only 373 by civil contract in the Registrars' offices; 12 were according to the usages of the Society of Friends; and 15 according to the Jewish rites.

The Roman Catholic Marriages are equal to a rate of 4.47 per 1,000 of the estimated number of Roman Catholics, being 0.13 over the corresponding average rate for the preceding ten years; and the other Marriages represent a rate of 6.33 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0.21 over the corresponding average rate.

Of the 3,665 Marriages according to the rites of the Church of Ireland, 46 were by special licence, 3,146 by licence, 435 after the publication of banns, 10 on Registrar's certificate, and in 28 instances there was no information afforded as to which of these methods was adopted.

\* Throughout this Report the rates for the total of Ireland are based on the estimated population in the middle of the respective years, and the rates for Provinces and Counties are based on the population according to the Census of 1891, the Provinces and Counties being so constituted after alterations made under the Local Government (Ireland) Act, 1898.

TABLE IV.—Marriages registered in Ireland in 1899 and each of the previous ten years, according to the modes of celebration; with the rate per 1,000 of the population represented:—

Average 1888-98,	2,676	2,313	273	284	9	8	5,223	14,758	20,948	690	470	610
1899,	2,694	2,317	273	282	12	12	5,265	14,764	22,315	690	470	610

During the year 1899 there were issued by the Registrars 801 Licences for Marriages in Registered Buildings and in the Registrars' offices.

The number of Marriage Licences issued by the licensing Ministers of the several Presbyterian bodies is given in the following summary:—

Presbytery or Synod.			Number of Licensing Ministers on 31st December, 1899.	Number of Registered Ministers on 31st December, 1899.	Number of Licensed Ministers on 31st December, 1899.
1. General Assembly of the Presbyterian Church in Ireland.			154	554	2,364
2. Remonstrant Synod of Ulster.			8	19	22
3. Presbytery of Antrim.			2	10	22
4. United Presbytery or Synod of Munster.			9	9	9
Total,			180	624	5,435

There being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics in Ireland, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may lawfully be solemnized without special licence, and from this it appears that, on the 31st December, 1899, there were 1,483 churches and chapels of the Church of Ireland, 615 registered Presbyterian Meeting-houses, and 393 "Registered Buildings" belonging to various religious denominations. Compared with the previous year, these numbers show a decrease of 3 as regards the Church of Ireland, an increase of 1 in the number of Presbyterian Meeting-houses, and an increase of 1 in the total number of "Registered Buildings."

The following statement shows the several religious bodies having "Registered Buildings" in 1899:—

Denomination.	No. Places of Worship.	Denomination.	No. Places of Worship.	Denomination.	No. Places of Worship.
Methodists,	236	Methodists, New Connexion,	7	United Original Seceders,	1
Reformed Presbyterians,	38	Jews,	3	Protestant Dissenters,	1
Independents,	25	"The Catholic Apostolic Church,"	2	Non-Subsidiary Christians,	1
Baptists,	25	Non-Subscribing Unitarians,	2	Congregational Union of Scotland,	1
Christian Brethren,	15	Evangelical Union,	1	United, &c.,	1
Mormons, or United Brethren,	9	Unitarians,	1	Undenominational,	—
United Presbyterians,	9	Congregationalists,	1	Total,	393
Seceders,	8	Welsh Presbyterians,	1		
Salvation Army,	8				

Of the 22,311 marriages registered during the year 1899, there were recorded in the first quarter, 6,571; in the second, 5,470; in the third, 5,206; and in the last, 5,064.

The marriages of bachelors and spinsters constitute 87·8 per cent. of the total; those of widowers and spinsters, 7·8 per cent.; of bachelors and widows, 2·7 per cent.; and of widowers and widows, 1·7 per cent. Thus, 9·5 per cent. of the men married were widowers, and 4·4 per cent. of the women were widows; and in 12 instances in every 100 marriages one or both of the contracting parties had been in the married state before.

TABLE V.—Showing by QUARTERLY Periods, the number of MARRIAGES registered in Ireland in each of the eleven years 1889-99, and the average number for the ten years 1889-98, distinguishing the number of Roman Catholic marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81:—

A complete registry of the exact ages of the persons married would be valuable from many points of view; hence it is matter for regret that in the great majority of instances the ages are not recorded. The requirements of the law are technically complied with by the entry in the age column of "minor" or of "full age," as the case may be, and there seems to be a general and increasing inclination to take advantage of this circumstance, as in 1899 the ages of both parties were specified in 3,634 cases only, being less than one-sixth of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances.

Of 22,311 men married during the year, 388, or 1·74 per cent., were minors; and of the women married, 1,634, or 7·32 per cent., were under age.

The highest proportion of husbands (2·31 per cent.) married under age in 1899 was in the province of Leinster; the highest proportion of wives (8·68 per cent.) married under age was in the province of Ulster.

It may be added that the per-centages of persons married in Ireland who were under age is very far below the corresponding rates in England and Scotland.

The signatures of the contracting parties in the marriage registers or certificates, afford a rough test of the progress of elementary education. In the year 1899, 19,368, or 86·8 per cent., of the husbands, and 19,758, or 88·6 per cent., of the wives, wrote their names, and the remainder signed by marks.

These figures show a considerable improvement as compared with the corresponding results in the first of the preceding ten years, the per-centages of persons married in 1889 who wrote their names being—men 75·8, and women 78·0, and they exhibit a great advance when compared with the per-centages for the year 1864, when the general registration of marriages in Ireland was established, in which year but 61 in every 100 men, and 50 in every 100 women married wrote their names.

The per-centages for the several provinces last year range, for men, from 81 in Connaught to 89 in Leinster, and, for women, from 85 in Ulster to 92 in Munster.

In 1,106 cases both of the parties married signed the register by "mark," and in 3,284 the register was thus signed by either the husband or the wife, so that in 4,390 cases, or 19·7 per cent. of the total number of marriages, one or both of the parties signed by mark; and in 17,921, or 80·3 per cent., both parties wrote their names.

The proportion per cent. of persons married in each of the eleven years 1889-99, who wrote their names in the registers or certificates, of minors, of widowers, and of widows are given in the following Table for Ireland, and for each of the four provinces.

**TABLE VI.—Showing as regards the Marriages in Ireland and in each of the Four Provinces during the years 1889-99, the proportion per cent. of Persons who signed their Names, of Persons not of Full Age, and of Re-marriages.**

In proportion to population at all ages, the registered marriages were most numerous in the province of Ulster, in which, however, the rate was only 5·5 per 1,000 of the population, according to the Census of 1891; Leinster comes next with 5·2 per 1,000; Munster third, with 4·1 per 1,000; and Connaught last, the rate being 3·2 per 1,000.

The highest rate for any county was 8·3 per 1,000 of the population in 1891, which was the marriage rate for Antrim; and the lowest 2·9 per 1,000, for Sligo. Between these, the most favourable were 7·6 for Dublin, and 5·4 for Down; and the least so 3·0 for Clare, 3·1 for Galway, and 3·3 for Mayo.

#### BIRTHS.

The number of births registered during the year 1899 is 103,900—53,351 boys and 50,549 girls, or 105·5 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 43·6, or 229 per thousand, which is 0·1 under the average rate per 1,000 for the ten years, 1889–98.

Of the 103,900 children whose births were registered in Ireland during the year 1899, 101,226, or 97·4 per cent., were legitimate, and 2,674, or 2·6 per cent., were illegitimate, the corresponding average percentages for the preceding 10 years being 97·3 and 2·7 respectively. It is unnecessary to say that these results compare very favourably with the returns for most other countries.

Of the children born in wedlock during the year, 51,993 were males, and 49,233 females, being 105·6 of the former to every 100 of the latter, and of the illegitimate children 1,338 were males, and 1,316 females, or 103·2 boys to 100 girls.

Comparing the provinces, we find that the per-centages of children born in Ulster, who were illegitimate, was 3·4; in Leinster, 2·5; in Munster, 2·3; and in Connaught, 0·7.

TABLE VII.—The Per-centages of Legitimate and of Illegitimate Births registered in Ireland during the years 1895–99, by Provinces.

Provinces.	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.				
	1895	1896	1897	1898	1899	1895	1896	1897	1898	1899
IRELAND.	99·8	97·1	97·4	97·6	97·4	3·1	2·6	2·6	2·7	2·6
Leinster.	99·5	97·5	97·0	97·4	97·3	2·6	2·4	2·5	2·6	2·5
Munster.	97·2	97·9	97·0	97·6	97·7	2·3	2·9	2·4	2·4	2·5
Ulster.	98·1	98·0	98·4	98·3	98·2	2·2	2·7	2·2	2·7	2·4
Connaught.	97·8	99·4	99·5	99·4	99·5	2·7	2·9	2·7	2·8	2·7

The respective total birth-rates for the provinces in 1899 were—Leinster, 22·5 per 1,000 of the population in 1891; Munster, 20·5; Ulster, 24·1; and Connaught, 19·4.

The four counties having the highest rates are Antrim, 31·0 per 1,000 of the population in 1891; Dublin, 28·9; Down, 28·7; and Londonderry, 22·3. Those with the lowest rates are—Monaghan, 17·0; Roscommon, 17·0; Longford, 17·1; and Leitrim, 17·4.

Of the total births, 51·5 per cent. were registered in the first six months of the year (181 days), and 48·5 per cent. in the second half of the year (184 days).

The number registered in the first quarter was 25,871 ; in the second, 27,595 ; in the third, 25,745 ; and in the fourth, 24,689.

### **DEATHS.**

The number of deaths registered during the year is 79,699, being equal to 1 in 56·9 or 17·6 per 1,000 of the estimated population. The deaths of males number 39,699, and those of females 40,000, the former being equal to 17·6 in every 1,000 males living and the latter representing 17·6 per 1,000 females.

The death-rate (17·6) is 0·5 under both the average rate for the preceding ten years, and the rate for the year 1898.

As usual, very many of the Registrars furnished at the close of each quarter valuable notes on the sanitary condition of their respective districts. These notes were embodied in the Quarterly Returns issued from this Department, and it is to be hoped that they received the serious attention of the various Local Authorities intrusted with the administration of the Public Health Acts.

With respect to the death-rates for the four provinces, the rate for Connaught is only 12·5 ; that for Munster is 15·3 ; for Ulster, 18·1 ; and for Leinster, 19·6 per 1,000 of the population in 1891.

Of the thirty-two counties, the five having the lowest registered mortality are—Leitrim, 11·7 ; Mayo, 12·0 ; Roscommon, 12·0 ; Galway, 13·0 ; and Kerry, 13·0.

Those in which the rate was highest are—Dublin, 28·3 ; Antrim, 23·2 ; Down, 19·3 ; Waterford, 18·3 ; and Armagh, 18·0.

The deaths registered in the first half of the year generally outnumber those in the second. In 1899, 53·7 per cent. of the total deaths were registered in the six months, January to June inclusive, and 46·3 per cent. in the remaining six months of the year.

The annual rates represented by the deaths registered in each quarter are as follows:—First quarter, 19·8 per 1,000 of the population ; second, 18·5 ; third, 15·6 ; and fourth, 17·0. The rates for the first and second quarters are below, and those for the third and fourth are above, the corresponding average rates for the respective quarters in the ten years, 1889–98.

From the Table on pp. 150–159 it will be seen that, of the 79,699 deaths registered during the year, 3,064 took place in Infirmaries and General and Special Hospitals ; 1,127 in Public Lunatic Asylums ; 9,657 in Workhouses and Workhouse Hospitals ; and 65,851 were of persons who died “At their Own Homes, &c.” As in former Reports a Table (see pages 160–1) is given showing like information for those Registrars’ Districts in which the principal Urban Districts in Ireland are situated.

The deaths in “Infirmaries and General and Special Hospitals” constitute 3·8 per cent. of the total number, the per-centages for the four provinces varying from 0·6 in Connaught to 9·1 in Leinster. Over twelve per cent. of the deaths registered occurred in Workhouses or Workhouse Hospitals, the respective per-centages for the provinces being—Leinster, 14·2 ; Munster, 16·1 ; Ulster, 9·1 ; and Connaught, 8·8.

TABLE VIII.—Showing, by Quarterly Periods, the number of Births and Deaths registered in Ireland in each of the eleven years, 1889-90, and the average number for the ten years, 1889-98.

#### CAUSES OF DEATH.

I submit a diagram (No. 2) showing the comparative mortality from twenty-two of the principal causes of death in Ireland in 1899. Taking these causes, it will be seen that the numbers range from 379 deaths from diphtheria to 14,216 deaths from old age. It may be interesting to note that the deaths from tuberculosis number 12,813, nearly approaching the deaths from old age.

#### L.—SPECIFIC FEBRILE OR ZYMOTIC DISEASES.

The number of deaths from Specific Febrile or Zymotic diseases registered during the year 1899 was 8,857 (4,264 males and 4,593 females), or 195 in every 100,000 of the estimated population, being 385 under the number for the preceding year, but 678, or 8 per cent., over the average for the ten years, 1889-98. The increase, as compared with the average, is due in part to epidemic Measles; also, the continued but abated prevalence of Influenza, a heavy mortality from Enteric Fever in Belfast, and a high Diarrhoeal death-rate in Belfast and Dublin.

Of the 8,857 deaths from zymotic diseases 5,256, or 59·3 per cent., were amongst children under 10 years of age.

The deaths from the principal zymotic diseases\* registered during 1899 form 8·1 per cent. of the deaths from all causes, and are equal to 143 in every 100,000 persons living; the average annual mortality from the same diseases in the preceding 10 years represented 6·9 per cent. of the average number of deaths from all causes, and was equal to 125 deaths in every 100,000 of the population.

Small-pox.—One death from small-pox, which took place at Larne Union, was registered during the year 1899; in the year 1895 there were 146 deaths from this disease.

\* Small-pox, Measles, Scarlet Fever, Typhus, Whooping-cough, Diphtheria, Simple Continued and Ill-defined Fever, Enteric Fever, Diarrhoea, Dysentery, and Cholera.

in 1896 4 deaths occurred, and in 1897 there were 3 deaths; but no death was registered in 1898 from small-pox.

*Measles*.—Measles became epidemic in the third quarter of 1899, and caused 1,532 deaths in Ireland during the year; in 1898 there were 316 deaths from measles; so that 1,216 deaths occurred in 1899 over the number taking place in 1898. The number of deaths exceeds the average of the preceding ten years by 810. The rate per 100,000—33·8—of deaths from measles, is in excess of the average rate of the decennial period 1889-98 by 18·2.

Of the 1,532 deaths from this cause last year, 649, or 42 per cent., occurred in the Dublin Registration Area.

The following TABLE (IX.) shows (1) the Number of Deaths from All Causes and from with the Average Annual Number for the ten years 1889-98, and (2) the respective

The distribution of the deaths from measles over the provinces was—745 in Leinster, 458 in Munster, 297 in Ulster, and 32 in Connaught. The number of deaths from measles in 1899 is the highest recorded since the year 1888, during which 1,935 deaths took place; those deaths were distributed over the provinces as follows:—359 deaths took place in Leinster, 888 in Munster, 599 in Ulster, and 89 in Connaught. The highest numbers of deaths from this cause occurring in Superintendent Registrars' districts, in 1899, were:—South Dublin, 391 deaths; North Dublin, 241; Belfast, 152; Killarney, 72; Waterford, 69; Tralee, 49; and Cork, 47 deaths from measles. The ages of those who died were, in most cases, under five years—1,317 out of the total 1,582. 156 died at the age period 5 and under 10 years; 19 at 10 and under 20 years; 12 deaths of persons 20 years and upwards from measles were registered, one being 65 years of age. The death-rate

\* See Note (\*) on page 3.

from measles in the whole of Ireland was 33·8 in each 100,000 of the estimated population of the country. In South Dublin Union the rate was 195 deaths in 100,000 of the population, and in North Dublin 162 per 100,000, estimated on the population taken at the Census of 1891. In Killarney the rate was 177 per 100,000, and in Tralee 109 per 100,000 of the population taken at the Census of 1891.

*Scarlet Fever.*—The mortality from scarlatina was low in 1899—205 deaths occurring, which is less than the number of deaths from this disease in 1898 by 120, and 270 under the average of the 10 years 1889-98. Of the deaths, 44 took place in Munster, 12 in Connaught, 73 in Leinster, and 76 in Ulster. The Unions in which the deaths chiefly occurred were:—Dublin, South, 35; Dublin, North, 14; Belfast, 25; and Waterford, 19. On looking back to the year 1883, when 1,765 deaths from scarlatina were registered, which represented a rate of 35·2 deaths to each 100,000 of the population, and comparing the death-rate in 1899, we find it to be 4·5, or 5·8 below the average of rate for the 10 years ending with 1898.

*Typhus Fever* caused 117 deaths only, being 106 below the number registered in 1898, and 124 under the average of the ten years 1889-98. In 1899 55 deaths occurred in Munster, 26 in Connacht, 24 in Leinster, and 12 in Ulster. The counties in which the deaths principally occurred were, in Cork 21, in Kerry 19, and in Sligo 12. The rate in 1899 per 100,000 of the population was 2·6, as compared with 1881, when the death-rate caused by typhus fever was 16·7 per 100,000 of the population. The highest number of deaths in any Superintendent Registrar's District was 8, which took place in Cork.

*Simple continued and ill-defined Fever.*—Under this heading 73 deaths were registered in 1899, a decline of 27 from the previous year, and 88 below the average for the ten years ending the 31st December, 1898; 23 deaths occurred in Connaught, 20 in Ulster, 17 in Munster, 18 in Leinster from this group of diseases.

*Enteric Fever.*—There is a difference of 394 between the number of deaths from enteric fever (1,284) which took place in 1898, and 890, the number registered in 1899. This number is, however, over the average of the preceding ten years by 4. Of the 890 deaths, 438 occurred in Ulster, 275 in Leinster, 123 in Munster, and 54 in Connaught. 280 deaths occurred in Belfast Union, 103 in Dublin, South, 74 in Dublin, North, 20 in Cork, 15 in Banbridge, 12 each in Ballymena and Lisburn, 11 in Newry, 10 in Carrickmacross and 10 in Antrim from this disease. The deaths in Belfast, 280, are over 31 per cent. of all deaths in Ireland from enteric fever; the number is, however, far short of 649, which occurred in Belfast in 1898, and which represented rather more than 50 per cent. of the total deaths from enteric fever in Ireland during that year. In 40 out of 159 Superintendent Registrars' Districts, no death from enteric fever is reported as having taken place. There were only two deaths in Wexford County, 4 in Meath, and 3 in Fermanagh from this disease. The death-rate from enteric fever was 19·6 per 100,000 of the population, which is 5 above the average rate for the ten years ending with 1898, but 8·7 per 100,000 below the rate per 100,000 for the year 1898. The deaths from this disease of persons aged 15 and under 45 years were 606, or nearly 58 per cent. of the total number.

TABLE XI.—Showing for the year 1899 the Deaths from the several forms of Fever at each Age-Period, with the proportion to the number of the living at each Age represented thereby.

*Whooping-cough.*—In the past 20 years the highest number of deaths from whooping-cough recorded was in the year 1883, when 2,041 deaths occurred; in 1898, 1,588 deaths took place, and in 1899, 988 were registered; this number is less by 600 than that of 1898, and represents a rate of 21.8 deaths in every 100,000 of the population, being 7.6 under the average rate per 100,000 for the ten years ending with 1898. Of the total number of deaths 920 were children under 5 years, 61 aged 5 and under 10 years, and 7 aged 10 and under 15; 349 deaths occurred in Ulster, 325 in Leinster, 217 in Munster, and 97 in Connaught. These figures correspond to the following death rates per 100,000 of the population:—Ulster, 21.5; Leinster, 27.3; Munster, 18.5; Connaught, 13.5. Of the deaths from this cause in the province of Leinster, there were 157 in Dublin (County and City), 44 in Carlow County, 23 in Queen's County. In Munster, there were 71 deaths in Cork (County and City), 35 in Tipperary, 29 in Waterford, 37 in Kerry. In Ulster, there were 210 deaths from whooping-cough in Antrim, 70 in Down, while in Connaught, 57 deaths occurred in Mayo, 31 in Galway, and 13 in Leitrim. The Unions in which the number of deaths from whooping-cough was over ten were the following:—Ballinrobe, 17; Baltinglass, 21; Belfast, 230; Carlow, 30; Castlebar, 18; Cork, 37; Dingle, 22; North Dublin, 53; South Dublin, 103; Kilmallock, 11; Kilrush, 16; Limerick, 11; Monntmellick, 20; New Ross, 12; Newtownards, 15; Thurles, 14; Tuam, 15; Waterford, 20; Wexford, 11 deaths.

*Diphtheria.*—The deaths, 379, from diphtheria are 6 in excess of those occurring in 1898, and 39 over the average number for the ten years 1889-98, and at the rate of 8.4 deaths per 100,000 of the estimated population; this rate is 1 over the average rate per 100,000 for the ten years ending with 1898. In the following Unions ten or more deaths from diphtheria occurred:—Belfast, 74 (or about one-fifth of the total number for Ireland); Dublin North, 32; Dublin South, 30; Kilkenny, 19; Ballymena, 17; Londonderry, 12; Cork, 11. The 19 deaths in Kilkenny correspond to the rate of 7.5 per 100,000 of the population. Of the total number, 185 occurred in Ulster, 128 in Leinster, 35 in Munster, and 21 in Connaught.

*Puerperal Fever.*—The number of deaths from puerperal fever, which fell in 1898 to 179, has risen to 210 in 1899—an increase of 31 deaths. The total is, however, 75 below the average number for the ten years 1889-98, and corresponds to a death-rate of 4.6 in 100,000 of the population, which figure is 1.5 under the average death-rate per 100,000 of the population from this disease during the previous decade. One hundred and seventeen of these deaths were of females of the age period 25 and under 35 years.

Twenty deaths occurred in Belfast Union, 12 in the Unions of Dublin North and Dublin South, and 7 in Cork Union from this disease.

*Influenza.*—Influenza became epidemic towards the close of 1899, and although not so fatal as in the year 1898, when 2,277 people became victims to it, nevertheless the death roll from this complaint in the year 1899 is considerable. It is peculiarly fatal in its attack upon the aged. The total number of deaths in 1899 (1,716) is 561 under the total of 1898, but 101 above the average for the decennial period 1889-98. The rate of deaths for 100,000 of the population is 37.9, or 2.9 in excess of the average death rate of the previous decade.

The disease was more fatal to females than to males, 904 of the former and 812 of the latter having succumbed.

Although no age appears to be exempt from the ravages of influenza, the period of life after 55 years affords 925 of the total deaths. 313 died at the age period 35 and under 55 years; 135 at 20 and under 35 years; 271 children under 10 years died; while in the period of life, 10 and under 20 years, 72 deaths occurred.

In Leinster the death-rate was 4.4 per 10,000 of the population; in Connaught, 4.3; in Ulster, 3.8; and in Munster, 2.2. The highest county rate was in Dublin, 6.3 per 10,000; and the lowest, 9 per 10,000, in the County Clare.

The Table (XII.) on page 15 shows the distribution of the deaths from influenza through the several counties.

*Simple Cholera.*—Although some of the principal zymotic diseases have diminished in their fatal effects during the year 1899, the diarrhoeal group caused an increased number of deaths in that year. Simple cholera caused 243 deaths, which number is 49 in excess of the number which the same disease caused in 1898, and 124 over the average number of deaths for the ten years ending with 1898, the counties Antrim, Dublin, and Cork furnish 64, 48, and 46 to the total respectively.

*Diarrhoea, Dysentery.*—2,060 is the highest number of deaths from this group of diseases recorded since the year 1880. This figure exceeds the number of deaths from these diseases occurring in 1898 by 236, and is above the average of the decade ending

[Continued on page 16.]

TABLE XII.—Showing, by Provinces and Counties, the number of Deaths from Influenza at each of five Age-Periods registered in Ireland during the year 1899, with the rate per 10,000 of the population\* represented by the deaths at all ages.

\* See Note on page 2.

with that year by 600 : it is equal to a rate of 4·5 deaths in each 10,000 of the estimated population of the country.

In Leinster the rate per 100,000 of the population was 60·2 deaths, in Ulster 50·6, in Munster 39·3, and in Connaught 8·6.

543 deaths occurred in Dublin County, 399 in Antrim, 225 in Cork, and 195 in the county Down.

*Hydrophobia, &c.*—No deaths from hydrophobia or glanders were registered: 18 persons are stated to have died of "Anthrax," "Spleenic Fever."

## II.—PARASITIC DISEASES.

Twenty-one deaths were caused by thrush, and diseases from animal parasites caused 22 deaths.

## III.—DIETETIC DISEASES.

*Intemperance.*—There were 114 deaths from chronic alcoholism registered—87 males and 27 females. There were 36 deaths from delirium tremens, 2 of these being females.

The total number, 150, is less than the number of deaths from intemperance occurring in 1898 by 24.

## IV.—CONSTITUTIONAL DISEASES.

The so-called constitutional diseases which include tuberculosis in its varied forms, caused 16,512 deaths in the year 1899, as compared with 16,594 deaths from these diseases in 1898. The number represents a rate of 364·4 deaths for every 100,000 of the population, or 1 in 4·8 of all deaths that have taken place during the year 1899.

*Phthisis.*—Pulmonary tuberculosis caused 9,480 deaths, being beneath the number occurring in 1898 by 198, and 315 under the average for the decade 1889-98.

*Tubercular Meningitis* caused 1,242 deaths, which exceeds the number of deaths occurring from this disease in 1898 by 32, and is over the average of the decade 1889-98 by 298.

*Tubes Mesenterica* caused 1,047 deaths, and other forms of tuberculosis 1,043 deaths. The total number of deaths from all forms of tuberculosis in 1899 was 12,812, which is at the rate of 2·8 per 1,000 of the population, and constitutes 16·1 per cent. of deaths from all causes. 5,213 of the total deaths from tubercular diseases occurred in towns containing 10,000 or more inhabitants, causing a death-rate of 5·0 in the populations of the districts, and being 19·6 per cent. of all deaths occurring in these districts. 7,599 of the deaths occurred in other parts of Ireland, giving a rate of 2 deaths from tubercular diseases in every 1,000 of the populations, and being 14·8 per cent. of the total number of deaths from all causes occurring in these districts.

The percentage death-rate from all forms of tubercular disease which in 1898 was 15·8, became 16·1 in 1899, which is above the average percentage of the previous eight years by .3.

The Table XIII. shows the number of deaths from the several forms of tubercular diseases for the 29 years ending with 1899, with rates and percentages of deaths from these diseases, etc.

Although the deaths from tubercular diseases are numerically less than in 1898 the death-rate from all forms of these diseases is 2·8 per 1,000 of the estimated population, or 1 in excess of the death-rate per 1,000 for the eight years 1891-98, in excess also to the same amount as compared with the average rate for the decade 1891-90, and 2 per 1,000 in excess of the rate per 1,000 for the ten years ending with 1890.

The Map opposite exhibits the rate per 10,000 of the population (according to the Census of 1891) represented by the deaths from tuberculosis registered in each Poor Law Union or Superintendent Registrar's District during the year 1899.

From this Map it appears that in three of the Unions the deaths from this cause were less than 10 per 10,000 of the population; in eighty-three the rate was 10 and under 20; in fifty-two it was 20 and under 28·3—28·3 being the average for Ireland; in seventeen it was 28·3 and under 40; in two, 40 and under 50—viz.: Cork 46·1, and Belfast 46·7 (the latter being calculated on the estimated population in the year 1899); and in two—viz.: Dublin South 57·5, and Dublin North 60·0—it was over 50 per 10,000.

TABLE XIII.—Showing the Number of Deaths from the following causes, viz., Tuberous Meningitis, Phthisis, "Miscellaneous Forms of Tuberculosis, Scrofula," and from All Causes, registered in Ireland on each of the twenty-nine years 1871-99, with the Rate per 1,000 of Estimated Population represented by (a) Deaths from the above-mentioned forms of Tuberculosis; (b) Deaths from all causes; and the per-centages of total Deaths caused by the tubercular diseases referred to, the figures for 1899 distinguishing deaths in the Bishops' Districts comprising Towns which in 1881 or 1891 had 10,000 or more inhabitants from those in other parts of the country.

YEAR	Number of Deaths from				Total Deaths from all the foregoing causes		Total Deaths from all causes		Per-centages of Deaths caused by the Diseases named in Columns 1, 2, 4, and 6.
	Tuberous Meningitis	Tubercular Meningitis	Phthisis	Miscellaneous Forms of Tuberculosis, Scrofula	Number	Rate per 1,000 of Estimated Population (a)	Number	Rate per 1,000

Gout.—The number of deaths from gout is 22 (9 males and 13 females); it shows an increase of one as compared with the number for the preceding year, which was 5 under that for 1897.

Cancer.—Cancer caused 2,634 deaths (1,193 males and 1,461 females), or 58.6 per 100,000 living, being 3 under the number of deaths recorded during the year 1896, but showing an increase equivalent to 31 per cent. as compared with the rate for the year 1889. During the ten years 1889-98, with one exception (the year 1895), there was a continuous increase in the mortality from this cause.

The following Table shows, by Sexes and Age-periods, the deaths from cancer registered during the year 1899, arranged according to the part of the body affected by the disease; also the number of deaths to 100,000 of the living at same age. It will be observed from the Table that the deaths entered under the first eleven headings therein, which relate to various parts of the head, neck, and throat, amount to 497, and that of these, 352, or more than two-thirds, were deaths of males. 636 of the classified cases were deaths from cancer of the stomach; 283 females died from cancer of the breast, and 174 females from cancer of the uterus. The Table shows also the total deaths from cancer in each of the ten years 1889-98, arranged by Age-periods.

## V.—DEVELOPMENTAL DISEASES.

14,875 deaths were caused in 1899 by the so-called developmental group of diseases. In 1898 the number amounted to 18,459, of which 17,777 were ascribed to old age, while in 1899 only 14,216 were tabulated under the latter heading. Premature birth caused 583 deaths.

## VI.—LOCAL DISEASES.

This class of diseases caused 32,272 deaths in 1899, as compared with 30,925 deaths from diseases in the same class in 1898. In all the orders the numbers are in excess of those for 1898, except in deaths from diseases of the organs of locomotion, where the numbers are equal, 212.

*Nervous System.*—6,762 deaths were caused by diseases of the nervous system, as compared with 6,194 in 1898 : of the former number 3,531 were males, and 3,231 were females ; convulsions caused 2,164 deaths ; apoplexy caused 1,384 deaths, and hemiplegia caused 1,322 deaths ; 8 deaths from idiopathic tetanus were registered, 4 males and 4 females ; 306 deaths were due to epilepsy, and 443 were registered as being due to inflammation of the brain, or its membranes ; general paralysis of the insane caused 289 deaths, softening of the brain 165, and 661 deaths were ascribed to other and undefined diseases of the brain and nervous system.

*Circulatory System.*—6,743 deaths were caused by diseases of the circulatory organs—3,897 being males and 3,346 females.

*Respiratory System.*\*—The number of deaths from diseases of the organs of respiration\* which took place in 1899 was 12,259, which exceeds the number of deaths from these diseases in 1898 by 160. 6,318 of the former number were males and 5,946 were females ; 7,519 deaths were due to bronchitis ; 3,079 to pneumonia. 4,750 of the 12,259 deaths occurred in Ulster, 3,638 in Leinster, 2,720 in Munster, and 1,151 in Connaught. The deaths from respiratory diseases were at the rate of 270·5 for each 100,000 of the estimated population of the country. The number of deaths in 1899 from these diseases is below the average of the 10 years 1889-98, by 1,533, and the rate per 100,000 is below the average rate per 100,000 for that period by 27·4.

*Digestive System.*—The deaths from disorders of the digestive system, 3,909, were 95 in excess of those in the preceding year, but 238 under the average of the decade ending with 1898. 1,973 were males and 1,926 were females. Diseases of the stomach caused 972 deaths, and diseases of the liver, not including cirrhosis, 508 deaths. 469 deaths were caused by ileus, 413 by enteritis, 378 by peritonitis, 132 by hernia, and 131 by dentition.

*Urinary System.*—The number of deaths from diseases of the urinary system in 1899 differs from that of 1898 by 20 only, and consists of 1,020 males and 573 females. Chronic Bright's disease, or albuminuria, caused 603 deaths, acute inflammation of the kidney caused 350 deaths ; diseases of the bladder and prostate gland caused 335 deaths, and uremia, calculus, and haematuria caused respectively 43, 28, and 17 deaths.

*Diseases of the organs of generation,* including pelvic abscesses, caused 120 deaths ; *diseases of parturition,* not including puerperal fever, 391 deaths (of which 107 were due to placenta praevia or flooding) ; *diseases of the organs of locomotion* caused 212 deaths, and *diseases of the lymphatic system and ductless glands* caused 71. 152 deaths were due to *diseases of the integumentary system*, including 10 deaths from carbuncle.

## VII.—VIOLENT DEATHS.

It appears that 1,896 deaths by accident, 36 by homicide, 128 by suicide, and three (men) by execution took place. The total number is 2,063, which exceeds the total of violent deaths in 1898 by 70.

In 1898 there were 67 cases of homicide and 145 of suicide, and in 1899 there were only 26 cases of homicide and 123 of suicide. The accidental deaths were, however, higher in 1899 by 17. The accidental deaths are 161 above the average of the ten years 1889-98.

*Inquests.*—The number of inquests held was 2,519—1,090 in Ulster, 775 in Leinster, 531 in Munster, and 123 in Connaught.

The Diagram opposite (No. 3) exhibits the variations in the mortality in Ireland from the following causes, during the last twenty years, viz. :—The principal symptomatic diseases, phthisis, bronchitis, pneumonia, diseases of the circulatory system, diseases of the brain and nervous system (exclusive of convulsions), and influenza.

## AGES.

Deaths of infants under 1 year old numbered 11,200, being equal to 10·8 per cent. of the number of births registered. The corresponding average percentage for the preceding ten years was 10·1.

Amongst children under 5 years of age 18,022 deaths occurred—a mortality equal to 39·8 in every 1,000 of the estimated number of the living at that age. Of these, 9,637

\* Exclusive of Phthisis or Pulmonary Consumption, for which see " Constitutional Diseases."

were boys and 8,385 girls; the former number representing 41·9 in every 1,000 boys and the latter 37·6 in every 1,000 girls under 5 years old.

The deaths of persons aged 65 years and upwards are equivalent to 9·0 per cent. of the estimated number of the living at that age.

Among the deaths registered are 684 of persons stated to have been aged 95 years or upwards—293 males and 391 females; of these 145 (68 males and 77 females) were returned as having been 100 years or upwards. In the absence of public records for remote periods, absolute verification of the ages of very old persons is not obtainable; but secondary inquiries having been made as regards persons returned during some recent years as centenarians, it was found, in almost every instance, that, so far as the Registrars could ascertain, the age was correctly stated.

### EMIGRATION.

According to the Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants (natives of Ireland) who left Ireland during the year 1899 was 41,232; of these 18,831 were males and 22,611 were females. Of the whole number, 3,542 were from the Province of Leinster; 15,768 from Munster; 8,701 from Ulster; and 18,331 from Connaught.

Of the total emigrants from Ireland in 1899, 7·7 per cent. were under 15 years of age; 82·9 per cent. were between 15 and 35 years old; and 9·4 per cent. were 35 or upwards.

### PRICES OF PROVISIONS, AND PAUPERISM.

The average price of the 4 lb. loaf (1st quality, delivered) in Dublin in the year 1899 was 5½d., being 1d. under the average price for the previous year.\* Oatmeal (1st quality) averaged 13s. 10d. per cwt. in Dublin: the average price for 1898 was 15s. 3d.; the average prices of potatoes in Dublin ranged from 2s. 5d. to 3s. 5d. per cwt., against 3s. 0d. to 4s. 3d. in 1898; and those of beef from 49s. 6d. to 57s. 6d. per cwt., against 44s. 6d. to 53s. in 1898.

TABLE XV.—AVERAGE PRICES IN DUBLIN of BEEF, OATMEAL, POTATOES and BEER, during the years 1899–99, and the AVERAGE NUMBER of PERSONS in IRELAND receiving IN-DOOR and OUT-DOOR RELIEF on Saturdays in these years; also the AVERAGE PRICES of PROVISIONS and the AVERAGE NUMBER of PERSONS in RECEIPT of BEER during each quarter of the year 1899.

4th	6½	14s. 0d.	4s. 8d.	44s. 0d.	45,000	43,000	

\* Prices for the years 1899–99 were derived from Returns received from "Johston's, Limited," and "Brown, Johnston & Co." (for Johnston, Mooney, and O'Brien, Limited)—the prices quoted for these two firms including delivery.

† Compiled from Returns furnished by the Local Government Board.

Surveying the period covered by several Tables in this Report, i.e., 1899, and the ten years preceding, it is found that beef was lowest in the year 1896, when the average prices ranged from 4s. 6d. to 5s. per cwt., and 1898, when they ranged from 4s. 6d. to 5s.; bread, oatmeal, and potatoes were cheapest in 1896, in which year the average price of bread (1st quality, delivered) was 5d. per 4 lb. loaf; the average price of oatmeal (1st quality) 12s. 7d. per cwt.; and the average range of prices of potatoes from 1s. 11d. to 2s. 11d. per cwt. The highest average price of bread was 6 $\frac{1}{2}$ d. per 4 lb. loaf in 1891, and of oatmeal 15s. 5d. per cwt. in 1891 and 1892; the highest range for potatoes, 3s. 6d. to 4s. 2d. per cwt. in 1891, and for beef, 5s. 6d. to 6s. per cwt. in 1890.

From Returns, for which I am indebted to the Local Government Board, it appears that the average number of workhouse inmates in Ireland on Saturdays during the year 1899 was 48,627, being 559 under the average for the preceding year; and that the average number of persons receiving out-door relief was 57,413, or 9,199 under the corresponding number for 1898.

#### **THE WEATHER.**

The following particulars and those given on pages 169-173, which are inserted by the kind permission of the Editor of the "Dublin Journal of Medical Science," have been derived from Returns of Meteorological Observations taken in Dublin City by Sir John W. Moore, M.D., PRESIDENT R.C.P.L., F.R.M.S.; and published in the Journal during the years 1899-1900. The Tables on pages 174-176, also, are founded on Sir John Moore's observations.

The mean Atmospheric Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A rainy day is one on which at least .01 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The Mean Height of the Barometer during the year 1899 was 29.939 inches. The highest observed reading was 30.037 inches at 9 A.M. on November 17th. The lowest observed reading was 28.330 inches, at 9 A.M. on December 29th. The extreme range of atmospheric pressure was .267 inches compared with 1.328 inches in 1898.

The Mean Temperature of the air for the year was 51.3°. The highest reading was 77.6° on August 24th; the lowest reading was 29.6° on December 27th. The average mean temperature for the years 1879-98, was 49.0°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 50.3°.

Rain fell on 186 days, including snow or sleet on 13 days and hail on 15 days. The average annual number of rainy days in the years 1879-98 was 195.6. The total rainfall measured 27.737 inches compared with an average of 27.448 inches in the twenty years 1879-98. During the first half of 1899 (January to June, inclusive) the rainfall was 11.295 inches on 95 days; during the second half (July to December, inclusive) 16.442 inches fell on 91 days.

As regards the Direction of the Wind, 730 observations were made during the year, with this result—N., 86; N.E., 57; E., 82; S.E., 67; S., 62; S.W., 125; W., 166; N.W., 93; Calms, 42.

I have the honour to be

Your Excellency's faithful servant,

ROBERT E. MATHESON,

*Registrar-General.*

GENERAL REGISTER OFFICE,  
CHARLEMONT HOUSE,  
Dublin, 23rd July, 1900.

## MARRIAGES, BIRTHS, and DEATHS registered in the Year 1899.

## E.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS, AND DEATHS, 1899.

## SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.\*

Wherever the minus sign (—) is prefixed to the entries given, it is to be understood "Deaths over Births." It denotes that the births, instead of cancelling the deaths, were, in fact, less than the deaths to the extent stated.

SUPERINTENDENT REGISTRAR'S DISTRICTS	AREA in STATES ACRES	Popula- tion, 1891	TOTAL			BIRTHS				DEATHS				Rate of Births over Deaths

NOTE.—The Registrar's Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are marked with the Registration Districts of the same name, except in a few instances. See note pp. 18 T.  
 The term *W.* denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrars' District. Wherever the supersign (*—*) is placed in the numbers given in the tables headed " Census of Deaths over Deaths," it denotes that the deaths, instead of exceeding the deaths, were, in fact, less than the deaths in the year stated.

1849	3,286,524	5,081,584	5,258,573								

NOTE.—This Table has been constructed for the years 1824 to 1899—By adopting the rates of increase of the male and female population between 1811 and 1891, as shown by the Irish Census Reports of 1841—the first complete Census of Ireland having been taken in 1821.

1811 to 1811—By adopting the rate of increase between the population of 1811 and 1821 according to the Irish Census Report of 1811.

1811 to 1821—By taking the English average birth-rate of 1 in 32, and death-rate of 1 in 48, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners to England.

1811 to 1811.—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Report of 1811; or otherwise, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the cause of the number then arrived at for 1811 over the actual population according to the Census of that year.

1811 to 1811.—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Deaths number less than 1811 as explained for the last period.

1811-18—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants and adjusting the results for the years 1811-18 and 1811-18 to allow for the discrepancy between the numbers thus arrived at for 1811 and 1810 respectively, and the population as shown by the Census in each of those years.

#### AGES of the POPULATION in IRELAND according to the Census Returns of 1861, 1871, 1881, and 1891.

Period	Sexes.	AGES.—THOUSANDS.												Total.	
		Under 5	1 and under 5	6 and under 10	10 and under 15	15 and under 20	20 and under 25	25 and under 30	30 and under 35	35 and under 40	40 and under 45	45 and under 50	50 and under 55		
1861.	Males.	91,626	503,583	500,713	382,314	226,304	127,197	64,149	35,811	16,184	8,040	3,940	2,114	714	5,437,370

	Total.	116,621	581,086	549,312	390,085	201,086	50,346	247,726	123,834	58,106	28,906	13,324	11,344	10,243,617	
1891.	Males.	48,026	192,813	209,406	26,537	322,314	220,382	200,249	220,905	97,927	229,002	95,449	46,120	8,218,945	
	Females.	48,210	193,873	209,338	27,039	322,354	220,443	200,181	200,181	97,927	229,002	95,449	46,120	8,218,707	
	Total.	96,730	392,554	418,773	54,576	648,059	442,735	400,362	400,362	195,854	458,004	191,311	92,239	16,522,414	

\* In 1822 instances in 1811, 2,428 males, and 1,645 females; in 1812 instances in 1811, 3,127 males, and 2,162 females; in 1813 instances in 1812, 3,127 males, and 2,162 females; and in 1814 instances in 1813, 3,126 males, and 2,161 females, the last was not stated in the Census.

**METEOROLOGICAL OBSERVATIONS  
FOR EACH MONTH OF THE YEAR 1899.**

By Sir JOHN W. MOORE, M.D., PRESIDENT R.C.P.L., F.R. MET. SOC.

(Extracted from the *Dublin Journal of Medical Science*.)

JANUARY, 1899, was a cloudy, rainy, generally open month. The weather, in a word, was essentially of a cyclonic and equatorial type. In Dublin rain fell daily in smaller or larger amount on each of the first 22 days. Then came a dry, cold period, corresponding with the presence of a large anticyclone over Western Europe. In the centre of this high-pressure system the barometer rose above 30·7 inches on the 26th. The most remarkable point about this anticyclone was the rapidity with which it took the place of a large and deep depression. On the 22nd, at 8 a.m., the barometer read 29·88 inches at Malin Head, in Donegal. Forty-eight hours later the reading at that station was 30·35 inches.

In Dublin the arithmetical mean temperature ( $42^{\circ}$ ) was above the average ( $41^{\circ}$ ); the mean dry bulb readings at 9 a.m. and 9 p.m. were  $41^{\circ}$ . In the thirty-four years ending with 1898, January was coldest in 1881 (M.T. =  $33\cdot2^{\circ}$ ), and warmest in 1898 (M.T. =  $47\cdot8^{\circ}$ ). In 1897 the M.T. was  $39\cdot1^{\circ}$ . As a general rule, January in Dublin is not colder, but a shade warmer than December. January, 1899, proved an exception to this rule, the M.T. being  $4^{\circ}$  below that of December, 1898 ( $47\cdot6^{\circ}$ ).

The mean height of the barometer was 29·711 inches, or 0·157 inch below the corrected average value for January—namely, 29·874 inches. The mercury rose to 30·667 inches at 9 a.m. of the 26th, and fell to 28·603 inches at 9 p.m. of the 1st. The observed range of atmospheric pressure was, therefore, 1·864 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was  $41\cdot8^{\circ}$ , or  $5\cdot6^{\circ}$  below the value for January, 1898. Using the formula, Mean Temp. = Mean. + (max. — min.  $\times \frac{1}{52}$ ), the M.T. becomes  $42\cdot5^{\circ}$ , compared with a twenty-five years' average of  $41\cdot5^{\circ}$ . The arithmetical mean of the maximal and minimal readings was  $42\cdot7^{\circ}$ , compared with a twenty-five years' average of  $41\cdot4^{\circ}$ . On the 4th the thermometer in the screen rose to  $55\cdot7^{\circ}$ —wind, S.W.; on the 24th the temperature fell to  $28\cdot5^{\circ}$ —wind, W. The minimum on the grass was  $23\cdot9^{\circ}$ , also on the 27th.

The rainfall was 2·468 inches, distributed over 24 days. The average rainfall for January in the twenty-five years, 1865-89, inclusive, was 2·900 inches, and the average number of rainy days was 17·3. The rainfall, therefore, and also the rainy days were above the average. The record rainfall for January was in 1895—namely, 5·711 inches on 24 days. In 1876, only .406 inch was measured on but 9 days; and in 1880 the rainfall was only .463 inch on but 8 days. In 1893, 1·786 inches fell on 14 days.

The atmosphere was foggy on the 5th, 6th, 9th, 15th, 24th, 26th, 27th, 28th, 29th, and 31st. High winds were noted on 13 days, reaching the force of a gale on 8 days—the 1st, 2nd, 12th, 15th, 16th, 18th, 19th, and 22nd. Snow and sleet fell on the 2nd, 11th, and 17th; hail on the 2nd, 16th, 18th, 19th, and 22nd. Snow and sleet fell on the 2nd, 11th, and 17th; hail on the 2nd. Temperature exceeded  $50^{\circ}$  in the screen on 13 days; while it fell to or below  $32^{\circ}$  in the screen on 4 nights, compared with only one night in 1898, 13 nights in 1897, only 3 in 1896, 18 in 1895, 7 in 1894, 4 in 1893, 15 in 1892, 7 in 1891, and 1 night in 1890. The minima on the grass were  $32^{\circ}$ , or less, on 16 nights, compared with only 3 nights in 1898, 21 nights in 1897, 8 nights in 1896, 29 in 1895, 17 in 1894, 16 in 1893, 25 in 1892, 21 in 1891, and 15 in 1890.

In Dublin the rainfall up to January 31st, 1899, amounted to 2·463 inches on 24 days, compared with 1·786 inches on 14 days in 1898, 2·694 inches on 17 days in 1897, only .799 inch on 14 days in 1896, and with a twenty-five years' average (1865-1889) of 2·900 inches on 17·3 days.

At Knockdrum, Greystones, Co. Wicklow, the rainfall was: 4·395 inches on 24 days, compared with 2·845 inches on 13 days in 1898, 3·660 inches on 20 days in 1897, only .485 inch on 7 days in 1896, and .6190 inches on 19 days in 1895. The heaviest falls in 24 hours were .590 inch on the 7th, and .463 inch on the 20th.

At Clonsevin, Killiney, Co. Dublin, the rainfall was 2·93 inches on 22 days, .37 inch being measured on the 6th. The average fall in January for the 14 years, 1885-1898, was 2·248 inches on 16·8 days. In 1895 the rainfall was 3·930 inches on 24 days, in 1898, .700 inch on 9 days, in 1897, 2·080 inches on 20 days, and in 1896, 1·580 inches on 13 days.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell to the amount of 4·760 inches on 23 days, the maximal falls in 24 hours being .745 inch on the 7th, and .673 inch on the 20th. The shade thermometers rose to  $55\cdot7^{\circ}$  on the 15th and fell to  $28\cdot5^{\circ}$  on the 25th.

FEBRUARY.—Stormy and wet during the first half of the month, the weather then became fine, dry, and reasonable, with a remarkably large diurnal range of temperature, particularly at inland stations in Great Britain— $30^{\circ}$  to  $33^{\circ}$  on the 22nd, 23rd, 24th, 26th and 27th. During the first fortnight depression followed depression from S.W., and the whole Atlantic seaboard was swept by fierce gales and deluged with rain. In mid-ocean the barometer is said to have fallen to 27·50 inches. Violent N.W. gales and snowstorms occurred at the same time in North America, so that conditions were cyclonic; Europe receiving the warm S. and S.W. winds of the vast depression, and North America its cold N. winds. On the 20th a heavy fall of rain occurred over St. George's Channel, the Irish Sea, and the adjoining Irish and Welsh coasts. After that date the weather was practically rainless, a large anti-cyclone, in which the barometer rose above 30·70 inches, covering the whole of North-Western Europe.

In Dublin the mean temperature ( $44^{\circ}$ ) was  $1^{\circ}$  above the average ( $42^{\circ}$ ); the mean dry bulb readings at 9 a.m. and 9 p.m. were  $42^{\circ}$ . In the thirty-four years ending with 1898, February was coldest in 1885 (M.T. =  $34^{\circ}$ ), and warmest in 1869 (M.T. =  $46^{\circ}$ ). In 1897 the M.T. was as high as  $46^{\circ}$ .

The mean height of the barometer was 29.746 inches, or 0.109 inch below the average value for February—namely, 29.855 inches. The mercury rose to 30.828 inches at 9 p.m. of the 28th, and fell to 29.772 inches at 9 a.m. of the 13th. The observed range of atmospheric pressure was, therefore, 1.056 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was  $42^{\circ}$ , or  $1^{\circ}$  above the value for January, 1898. Using the formula, Mean Temp. = Min. + (max. — min.  $\times$  50), the M.T. is  $44^{\circ}$ , compared with a twenty-five (1863–1889) years' average of  $42^{\circ}$ . On the 9th the thermometer in the screen rose to  $56^{\circ}$ —wind, S.W.; on the 27th the temperature fell to  $29^{\circ}$ —wind, S.W. The minimum on the grass was  $25^{\circ}$ , on the 28th—wind, calm.

The rainfall was 2.168 inches, distributed over 15 days. The average rainfall for February in the twenty-five years, 1865–89, inclusive, was 2.150 inches, and the average number of rainy days was 17.2. The rainfall, therefore, was slightly above, while the rainy days were below the average. In 1883 the rainfall in February was large—3.752 inches on 17 days; in 1879, also, 3.766 inches fell on 23 days. On the other hand, in 1891 only .042 inch was measured on but 2 days. The record of .042 inch on 2 days is probably unparalleled in Dublin.

The atmosphere was foggy on 7 days—the 3rd, 17th, 18th, 19th, 20th, 27th, and 28th. The amount of cloud—55 per cent.—was much below the average—56 per cent. High winds were noted on 12 days and reached the force of a gale on the 8th, 9th, 10th, 13th, and 14th. Lunar halos were seen on the 19th and 25th. Snow or sleet and hail fell on the 2nd. Lightning was seen on the 8th and 9th.

The temperature reached or exceeded  $50^{\circ}$  in the screen on 10 days, and it fell below  $32^{\circ}$  on 4 nights, compared with as many as 18 nights in 1895, only 1 night in 1896, and 7 nights in 1898. The minima on the grass were  $32^{\circ}$ , or less, on 14 nights, compared with every night in 1895, and 10 nights in 1898. The thermometer once failed—on the 3rd—to rise to  $40^{\circ}$  in the screen.

In Dublin the rainfall up to February 28th, 1898, amounted to 4.631 inches on 39 days, compared with 3.229 inches on 32 days in 1896, only .714 inch on 16 days in 1891, and a twenty-five years' (1865–1889) average of 4.830 inches on 34.5 days.

At Knockdolian, Graysates, Co. Wicklow, 4.215 inches of rain fell on 18 days. The heaviest fall in 24 hours was .820 inch on the 20th. The total fall to February 28th inclusive was 3.610 inches on 42 days, compared with 3.980 inches on 38 days in 1896, 3.190 inches on 37 days in 1897, and only 1.940 inches on but 17 days in 1896.

The rainfall in February at Clonskevin, Killiney, Co. Dublin, amounted to 3.315 inches on 14 days. The average rainfall for February during 14 years (1885–95) at this station is 1.465 inches on 13.2 days. The greatest rainfall in 24 hours was .75 inch on the 20th. Since January 1 the rainfall was 6.23 inches on 38 days, compared with 9.82 inches on 29 days in 1896, 4.31 inches on 38 days in 1897, and 1.64 inches on 19 days in 1898.

At the Ordnance Survey Office, Phoenix Park, only 1.405 inches of rain fell. This was due to the prevalence of S.E. winds, from which the Phoenix Park is sheltered by the ranges of the Dublin and Wicklow mountains.

**MARCH.**—A dry and generally favourable month. From the 12th to the 19th conditions were anticyclonic, and the diurnal range of temperature was large—amounting to upwards of 30 degrees Fahr. at some inland British stations. On Sunday, the 10th, a large and deep depression travelled southwards across Scandinavia to Central Europe, and in its wake a series of secondary depressions brought strong northerly winds, snow and hail, and intense cold to all parts of North-western Europe. In some districts of Great Britain the mean temperature of the week ending Saturday, the 25th, was  $10^{\circ}$  to  $12^{\circ}$  below the average. The last few days were cloudy, mild and showery—a fresh S.W. gale being felt on the 28th and 29th.

In Dublin the arithmetical mean temperature ( $45.1^{\circ}$ ) was  $2^{\circ}$  above the average ( $43.1^{\circ}$ ); the mean dry-bulb readings at 9 a.m. and 9 p.m. were  $43^{\circ}$ . In the thirty-three years ending with 1898, March was coldest in 1867 and 1883 (M.T. =  $39^{\circ}$ ), and warmest in 1893 (M.T. =  $48.1^{\circ}$ ) and in 1868 (M.T. =  $47.3^{\circ}$ ).

The mean height of the barometer was 29.853 inches, or 0.107 inch above the corrected average value for March—namely, 29.916 inches. The mercury rose to 30.835 inches at 10.30 p.m. of the 1st, and fell to 29.885 inches at 9 p.m. of the 6th. The observed range of atmospheric pressure was, therefore, 1.700 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was  $43^{\circ}$ . Using the formula, Mean Temp. = Min. + (max. — min.  $\times$  .50), the M.T. becomes  $44^{\circ}$ . The arithmetical mean of the maximal and minimal readings was  $45.1^{\circ}$ , compared with a twenty-five years' average of  $43.1^{\circ}$ . On the 31st the thermometer in the screen rose to  $59^{\circ}$ —wind, W.S.W.; on the 22nd the temperature fell to  $26^{\circ}$ —wind, W.N.W. The minimum on the grass was  $21^{\circ}$  on the 23rd.

The rainfall was .911 inch, distributed over 12 days. The average rainfall for March in the twenty-five years, 1865–89, inclusive, was 2.061 inches, and the average number of rainy days was 16.3. The rainfall, therefore, and also the rainy days, were much below the average. In 1867 the rainfall in March was very large—4.372 inches on 22 days. On the other hand, the smallest March rainfall was .288 inch on 8 days in 1898.

The atmosphere was more or less foggy in the city on 4 days—viz., the 34th, 15th, 16th, and 17th. High winds were noted on 9 days, reaching the force of a gale on two occasions—the 28th and 29th. Snow or sleet occurred on the 9th, 20th, 21st, 22nd, and 23rd; and hail also fell on the

days named. The temperature exceeded 50° in the screen on 19 days, compared with 9 days in 1898, 14 in 1897, 21 in 1896, 13 in 1895, 22 in 1894, 26 in 1893, and only 7 in 1892. It fell to or below 32° in the screen on five occasions. The minima on the grass were 32°, or less, on 13 nights, compared with 16 nights in 1898, 9 in 1897, 8 in 1896, 10 in 1895, 12 each in 1894 and 1893, and 25 in 1892. The thermometer never rose to 60° in the screen, and never failed to each 40°. Solar halos were seen on the 26th and 27th. Lunar halos appeared on the 19th and 24th.

The rainfall in Dublin during the three months ending March 31st amounted to 5,563 inches on 51 days, compared with 4,570 inches on 48 days in 1898, 7,069 inches on 57 days in 1897, 4,698 inches on 47 days in 1896, 9,054 inches on 52 days in 1895, 6,038 inches on 58 days in 1894, 5,196 inches on 49 days in 1893, 4,808 inches on 48 days in 1892, only 1,650 inches on but 32 days in 1891, and a twenty-five years' average of 6,111 inches on 51·0 days (1863-1888, inclusive).

At Knockdolian, Greystones, Co. Wicklow, 1,680 inches of rain fell on only 9 days. The corresponding figures for March, 1898, are 765 inches of rain on 12 days. The maximal fall in 24 hours was 310 inch on the 28th. The total rainfall since January 1, 1899, equals 9,690 inches on 51 days.

The rainfall in March at Clonsevin, Killiney, Co. Dublin, was 67 inch on 9 days, compared with 1,29 inches on 15 days in 1898; 3·28 inches on 23 days in 1897, 2·61 inches on 23 days in 1896, 3·29 inches on 21 days in 1895, 1·11 inches on 14 days in 1894, 26 inch on 9 days in 1893, 98 inch on 10 days in 1892, and a fourteen years' (1863-95) average of 1,932 inches on 15·7 days. The maximum in the 14 years was 3·58 inches in 1888; the minimum was .26 in 1893. At this station the total rainfall since January 1 was 6·95 inches on 45 days, compared with a fall of 4·61 inches on 44 days in the first quarter of 1898. On the 28th, 15 inch fell.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was—in February, 4,115 inches on 16 days (950 inch being measured on the 20th); in March, 1,054 inches on 9 days (341 inch being measured on the 28th). The total rainfall from January 1 to March 31, inclusive, was 9,929 inches on 48 days, compared with 4,767 inches on 40 days in the first quarter of 1898, and 10,036 inches on 57 days in the first quarter of 1897. The extremes of temperature were—in February, highest, 57·1° on the 28th, lowest, 32·7° on the 3rd; in March, highest, 61·0° on the 31st, lowest, 26·7° on the 23rd.

**APRIL.**—April, 1899, proved a changeable, showery, and cloudy month. The wind was particularly variable in direction and force. A prolonged series of gales was experienced from the 4th to the 8th, inclusive. There was a cold spell from the 13th to the 19th. As in April, 1898, at the close many forest trees were in full leaf.

In Dublin the arithmetical mean temperature (48·6°) was 0·9° above the average (47·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 67·3°. In the thirty-four years ending with 1898, April was coldest in 1879 (the cold year) (M. T.—44·5°), and warmest in 1898 (M. T.—51·4°). The month of April, 1893, was the warmest for at least 30 years.

The mean height of the barometer was 29·796 inches, or 0·054 inch below the average value for April—namely, 29·850 inches. The mercury rose to 30·237 inches at 9 a.m. of the 22nd, and fell to 28·965 inches at 9 a.m. of the 13th. The observed range of atmospheric pressure was, therefore, 1·292 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 47·8°, or 3·9° above the value for March, 1899. Using the formula,  $\text{Mean Temp.} = \text{max.} + (\text{max.} - \text{min.}) \times 97\%$ , the value is 48·8°, or 0·9° above the average mean temperature for April, calculated in the same way, in the twenty-five years, 1863-89, inclusive (47·6°). The arithmetical mean of the maximal and minimal readings was 48·6°, compared with a twenty-five years' (1863-1889, inclusive) average of 47·7°. On the 28th the thermometer in the screen rose to 84·0°—wind, S.S.W.; on the 16th the temperature fell to 35·1°—wind, N.N.E. The minimum on the grass was 30° on the 18th.

The rainfall in April was 1,993 inches, distributed over 20 days. The average rainfall for April in the twenty-five years, 1863-89, inclusive, was 2,055 inches, and the average number of rainy days was 15·2. The rainfall, therefore, was slightly below, whereas the rainy days were much above the average. In 1877 the rainfall in April was very large—4,707 inches on 31 days. On the other hand, in 1873 only 498 inch was measured on 8 days. In 1898, 2,666 inches fell on 16 days.

Fog was observed on the 1st, 9th, 24th, and 27th. High winds were noted on 10 days, reaching the force of a gale on the 4th, 5th, 6th, 7th, and 8th. Hail fell on the 8th, 14th, and 17th; sleet on the 17th. The temperature rose to or above 60° in the screen on 5 days. It thrice failed to reach 50° (on the 14th, 16th, and 17th). It never fell to 32° in the screen, but on 7 nights it fell to or below 32° on the grass. The mean lowest temperature on the grass was 37·6°, compared with 40·2° in 1898, 37·7° in 1897, 40·6° in 1896, 37·8° in 1895, 40·0° in 1894, 38·2° in 1893, 32·4° in 1892, 34·1° in 1891 and 1890, 34·2° in 1888, 34·6° in 1888, and 31·6° in 1887. Solar halos were seen on the 3rd, 16th, 18th, and 19th; lunar halos on the 18th and 19th. Slight thunder and lightning occurred on the 24th.

The rainfall in Dublin during the four months ending April 30th amounted to 7,557 inches on 71 days, compared with 7,236 inches on 64 days in 1898, 9,554 inches on 79 days in 1897, 5,781 inches on 63 days in 1896, 10,233 inches on 65 days in 1895, 9,131 inches on 73 days in 1894, 6,242 inches on 56 days in 1893, 5,023 inches on 61 days in 1892, only 3,203 inches on 46 days in 1891, and a twenty-five years' average of 8,466 inches on 66·2 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall amounted to 2,690 inches on 19 days. The heaviest falls in 24 hours were .550 inch on the 12th, and .565 inch on the 13th. The total rainfall in 1899, up to April 30th, was 12,330 inches on 70 days, compared with 8,890 inches on 56 days in 1898, 13,030 inches on 80 days in 1897, 5,036 inches on 50 days in 1896, 12,570 inches on 54 days in 1895, 12,456 inches on 70 days in 1894, and 8,530 inches on 54 days in 1893.

At Clonoevin, Killiney, Co. Dublin, 297 inches of rain fell on 29 days. The maximal fall in 24 hours was 48 inch on the 13th. The average rainfall in April of the fourteen years, 1883-98, was 1977 inches on 127 days. Since January 1, 1899, 902 inches of rain fell at this station on 65 days, compared with 774 inches on 61 days in 1898, 1036 inches on 83 days in 1897, 527 inches on 55 days in 1896, 1128 inches on 66 days in 1895, 909 inches on 74 days in 1894, and 994 inches on 57 days in 1893.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 2722 inches on 19 days, compared with 4441 inches on 15 days in 1898, and 3406 inches on 19 days in 1897. On the 12th, 463 inch was measured, and on the 13th 410 inch. The maximal temperature in the shade was 61.2° on the 3rd. The minimal temperature in the screen was 33.7° on the 18th. At this station 12,631 inches of rain fell on 67 days up to April 30th, compared with 9,206 inches on 55 days in the corresponding period of 1898, and 13,492 inches on 70 days in the first four months of 1897.

MAY.—Both at the beginning and at the close fair anticyclonic weather prevailed, calm, cold nights alternating with bright, sunny, and sometimes warm days. During the central fortnight conditions were cyclonic, and the weather was very disturbed, rainy and cold. Rain fell daily from the 11th to the 24th, inclusive, the total fall being a little over the average.

In Dublin the arithmetical mean temperature (51.8°) was slightly below the average (52.0°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 51.0°. In the thirty-four years ending with 1898, May was coldest in 1869 (M. T. = 48.2°), and warmest in 1883 (M. T. = 50.7°). In 1898 the M. T. was 51.2°.

The mean height of the barometer was 30.001 inches, or 0.012 inch above the corrected average value for May—namely, 29.989 inches. The mercury rose to 30.538 inches at 1 p.m. on the 28th, and fell to 29.836 inches at 8 p.m. on the 15th. The observed range of atmospheric pressure was, therefore, 1.204 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 51.0°, or 3.7° above the value for April, 1890, (47.3°). Using the formula, Mean Temp. = Min. + (max. - min. × .47), the value was 51.4°, or 0.2° below the average mean temperature for May, calculated in the same way, in the twenty-five years, 1865-89, inclusive (51.6°). The arithmetical mean of the maximal and minimal readings was 51.8°, compared with a twenty-five years' average of 52.0°. On the 31st the thermometer in the screen rose to 63.0°—wind, E. On the 27th the temperature fell to 38.0°—wind, W. The minimum on the grass was 33.0° on the 6th.

The rainfall amounted to 2095 inches, distributed over 16 days. The average rainfall for May in the twenty-five years, 1865-89, inclusive, was 2030 inches, and the average number of rainy days was 15.4. The rainfall and the rainy days were thus somewhat above the average. In 1896 the rainfall in May was very large—5,473 inches on 21 days; in 1898, also, 5,414 inches fell on 19 days. On the other hand, in 1895 only 177 inch was measured on but 5 days. In 1896 the fall was only 190 inch on 7 days. In 1898 as much as 3,332 inches fell on 29 days.

A lunar corona was seen on the 20th; solar halos appeared on the 1st, 17th, and 26th. High winds were noted on 6 days, but did not attain the force of a gale on any occasion. The atmosphere was slightly foggy on the 10th, 12th, and 29th. Hail fell on the 16th. Thunder was heard on the 15th.

During the month the thermometer did not fall below 32° in the screen or on the grass. The mean minimal temperature on the grass was 40.6°, compared with 42.9° in 1898, 40.9° in 1897, 43.1° in 1896, 41.8° in 1895, 37.6° in 1894, 45.6° in 1893, 41.3° in 1892, 37.7° in 1891, 42.2° in 1890, 42.4° in 1889, and 37.5° in 1888. The maximum exceeded 60° on 10 days, but never fell short of 50°.

The rainfall in Dublin during the five months ending May 31st amounted to 9,632 inches on 87 days, compared with 10,568 inches on 84 days in 1898, 10,693 inches on 93 days in 1897, 5,971 inches on 70 days in 1896, 10,410 inches on 68 days in 1895, 12,709 inches on 90 days in 1894, 7,908 inches on 66 days in 1893, 10,699 inches on 80 days in 1892, only 5,995 inches on 63 days in 1891, and a twenty-five years' average of 10,496 inches on 81.6 days.

At Knockdrum, Greystones, Co. Wicklow, the rainfall was 3,095 inches, distributed over 18 days—555 inch falling on the 17th and 340 inch on the 18th. The total fall since January 1st, 1899, equals 15,475 inches on 86 days, compared with 12,445 inches on 78 days in 1898, 14,120 inches on 90 days in 1897, 5,716 inches on 52 days in 1896, 12,845 inches on 58 days in 1895, 15,436 inches on 85 days in 1894, and 9,565 inches on 63 days in 1893.

The rainfall at Clonoevin, Killiney, was 2,13 inches on 14 days, 36 inch being measured on the 17th. The average rainfall in May at this station during the 14 years, 1885-1898, inclusive, was 2,063 inches on 13.4 days. Since January 1, 1899, 14.15 inches of rain have fallen at Clonoevin on 78 days. This compares with a 14 years' average of 2,665 inches on 71.8 day.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall in May was 2,240 inches on 16 days, compared with 3,251 inches on 19 days in 1898, and 0.802 inch on 11 days in 1897. The maximal fall in 24 hours was 330 inch on the 17th. Since January 1, 14,381 inches of rain have fallen at this station on 83 days, compared with 13,458 inches on 74 days in the corresponding 5 months of 1898. The maximum shade temperature was 67.7° on the 30th; the minimum was 36.3° on the 6th, 15th, and 27th.

JUNE.—June, 1899, was a fine, warm, and sunny month. In and near Dublin it was rainless until the 17th, when an absolute drought of 23 days' duration was broken by a general fall of rain. On the 20th a heavy downpour took place, the measurement exceeding 1.4 inches at the Co. Wicklow stations. A severe thunderstorm early on the morning of the 23rd brought 1.420 inches of rain to

Greystones, 1.087 inches to the Consumption Hospital at Newcastle, but only 240 inch to Dublin. At the close of the month the weather fell into a broken, rainy, chilly condition. In Dublin the mean amount of cloud during the month was as low as 43.7 per cent., only one-third of the sky on the average being covered at 9 p.m.

In Dublin the arithmetical mean temperature ( $61.3^{\circ}$ ) was above the average ( $57.8^{\circ}$ ) by  $3.5^{\circ}$ ; the mean dry bulb readings at 9 a.m. and 9 p.m. were  $60.5^{\circ}$ . In the thirty-four years ending with 1898, June was coldest in 1892 (M.T. =  $55.8^{\circ}$ ), and in 1879 ("the cold year") (M.T. =  $53.9^{\circ}$ ). It was warmest in 1887 (M.T. =  $52.3^{\circ}$ ); in 1895 (M.T. =  $51.0^{\circ}$ ); and in 1896 (M.T. =  $51.4^{\circ}$ ).

The mean height of the barometer was 30.071 inches, or 0.154 inch above the corrected average value for June—namely, 29.917 inches. The mercury rose to 30.406 inches at 9 a.m. of the 9th, and fell to 29.892 inches at 9 a.m. of the 20th. The observed range of atmospheric pressure was, therefore, 1.074 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was  $60.6^{\circ}$ , or  $9.5^{\circ}$  above the value for May, 1899. Using the formula, Mean Temp. =  $\text{Min.} + (\text{max.} - \text{min.}) \times .465$ , the value was  $60.5^{\circ}$ , or  $3.6^{\circ}$  above the average mean temperature for June, calculated in the same way, in the twenty-five years, 1865-89, inclusive ( $57.2^{\circ}$ ). The arithmetical mean of the maximal and minimal readings was  $61.3^{\circ}$ , compared with a twenty-five years' average of  $57.8^{\circ}$ . On the 11th the thermometer in the screen rose to  $74.4^{\circ}$ —wind, N.E.; on the 19th the temperature fell to  $45.9^{\circ}$ —wind, N.W. The minimum on the grass was  $40.9^{\circ}$  on the 19th.

The rainfall amounted to 1.643 inches on only 8 days. The average rainfall for June in the twenty-five years, 1865-89, inclusive, was 1.817 inches, and the average number of rainy days was 13.8. The rainfall, therefore, was slightly below, while the rainy days were far below the average. In 1878 the rainfall in June was very large—5.058 inches on 19 days; in 1879, also, 4.046 inches fell on 24 days. On the other hand, in 1889 only 1.00 inch was measured on 6 days; in 1887 the rainfall was only 2.52 inch, distributed over only 5 days. In 1895 1.547 inches fell on 14 days.

High winds were noted on only 3 days, and the force of a gale was on no occasion attained. The atmosphere was foggy on the 22nd. Solar halos were seen on the 3rd and 19th. Temperatures reached or exceeded  $70^{\circ}$  in the screen on 14 days, compared with 17 days in 1887, only 1 day in 1888, and 4 days in 1898. A thunderstorm occurred on the 28th, and lightning was seen on the 17th. Hail fell on the 23rd.

The rainfall in Dublin during the six months ending June 30th amounted to 11.295 inches on 95 days, compared with 12.115 inches on 98 days in 1898, 13.950 inches on 113 days in 1897, 7.854 inches on 54 days in 1896, 12.282 inches on 80 days in 1895, 14.261 inches on 109 days in 1894, 9.624 inches on 78 days in 1893, 11.770 inches on 97 days in 1892, 8.748 inches on 77 days in 1891, only 6.741 inches on 67 days in 1887, and a twenty-five years' average of 12.313 inches on 95.4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall was 4.035 inches, distributed over 9 days. Of this quantity 1.599 inches fell on the 20th, and 1.420 inches on the 27th. The total fall since January 1 has been 19.510 inches on 95 days, compared with 18.500 inches on 88 days in the first six months of 1898, 18.125 inches on 106 days in those of 1897, 7.856 inches on 61 days in the same period of 1896, 14.276 inches on 67 days in 1895, 17.381 inches on 96 days in 1894, and 11.776 inches on 75 days in 1893.

The rainfall at Clonseay, Killiney, Co. Dublin, amounted to 2.77 inches on 10 days. The greatest fall in 24 hours was 1.30 inches on the 20th. The average rainfall for June in the 14 years, 1885-1898, was 1.700 inches on 12.5 days. In 1897 2.59 inches fell on 20 days, in 1898 2.05 inches fell on 15 days. Since January, 1898, 13.62 inches of rain have fallen at this station on 89 days, compared with 13.10 inches on 97 days in the corresponding six months of 1898.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 3.748 inches on 8 days, compared with 2.439 inches on 14 days in June, 1898, and 4.078 inches on 15 days in June, 1897. On the 20th 1.632 inches were measured, and on the 27th 1.037 inches. The maximum temperature in the shade was  $70.3^{\circ}$  on the 8th; the minimum temperature in the shade was  $42.9^{\circ}$  on the 19th. At this station the rainfall for the six months ending June 30 amounted to 18.638 inches on 91 days, compared with 14.918 inches on 88 days in the same period of 1898, and 18.372 inches on 105 days in that of 1897.

**JULY.**—A warm but changeable month, with very clouded skies (72 per cent. of cloud) and occasional heavy rains. Both atmospheric pressure and temperature ruled high. Winds from westerly points (from N.W. through W. to S.W.) largely predominated. Periods of excessive heat were felt in the S. and S.E. of England, and coincidently torrential rains occurred in Ireland and Wales; on the 11th 1.402 inches fell in Dublin; on the 20th and 21st 3.26 inches fell at Holyhead. A remarkable feature was the occurrence of afternoon "evaporation" showers, with a high and steady barometer, from the 13th to the 18th inclusive. In one such shower on the 17th the measurement at Fassaroe, near Bray, was 1.289 inches. In London, on the night of the 22nd, thunder rains occurred, varying from only 1.5 inch to 1.70 inches.

In Dublin the arithmetical mean temperature ( $62.2^{\circ}$ ) was above the average ( $60.6^{\circ}$ ); the mean dry-bulb readings at 9 a.m. and 9 p.m. were  $61.1^{\circ}$ . In the thirty-four years ending with 1898 July was coldest in 1879 ("the cold year") (M.T. =  $57.2^{\circ}$ ). It was warmest in 1887 (M.T. =  $63.7^{\circ}$ ), and in 1898 ("the warm year") (M.T. =  $63.5^{\circ}$ ). In 1898 the M.T. was  $60.6^{\circ}$ .

The mean height of the barometer was 30.086 inches, or 0.171 inch above the corrected average value for July—namely, 29.915 inches. The mercury reached 30.471 inches at 9 a.m. of the 31st, and fell to 29.439 inches at 9 a.m. of the 1st. The observed range of atmospheric pressure was, therefore, 1.032 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 61.1°, or 0.6° above the value for June, 1899. Using the formula, Mean Temp. = Min. + (max. - min. × .465), the value was 61.8°, or 1.6° above the average mean temperature for July, calculated in the same way, in the twenty-five years, 1865-89, inclusive (60.2°). The arithmetical mean of the maximal and minimal readings was 62.2°, compared with a twenty-five years' average of 60.6°. On the 5th the thermometer in the screen rose to 74.9°—wind, W.B.W.; on the 18th the temperature fell to 49.1°—wind, S.W. The minimum on the grass was 44.9° on the 13th.

The rainfall was 3121 inches, distributed over 13 days. The average rainfall for July in the twenty-five years, 1865-89, inclusive, was 3420 inches, and the average number of rainy days was 17.2. The rainfall, therefore, was above, whereas the rainy days were much below the average. In 1889 the rainfall in July was very large—8.037 inches on 24 days; in 1896, also, 5.474 inches fell on 18 days. On the other hand, in 1870 only .339 inch was measured on 8 days; in 1869 the fall was only .739 inch on 9 days; and in 1868 .741 inch fell on but 5 days. In 1893 945 inch fell on only 8 days.

High winds were noted on 5 days, but attained the force of a moderate gale on only one occasion—the 26th. Temperature reached or exceeded 70° in the screen on 11 days. In July, 1887, temperature reached or exceeded 70° in the screen on no fewer than 17 days. In 1888 the maximum for July was only 68.7°.

There was a thunderstorm on the 6th. Thunder occurred on the 17th. A solar halo was seen on the 8th. The atmosphere was rather foggy on the 19th, 20th, 21st, 22nd, and 31st.

The rainfall in Dublin during the seven months ending July 31st amounted to 14,416 inches on 107 days, compared with 13,050 inches on 105 days in 1898, 15,000 inches on 125 days in 1897, 13,328 inches on 102 days in 1896, 16,753 inches on 96 days in 1895, 18,133 inches on 130 days in 1894, 7,335 inches on 50 days in 1887, and a twenty-five years' average of 14,733 inches on 112.6 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in July was 3,480 inches on 14 days, compared with 1,145 inches on 6 days in 1898, 1,625 inches on 10 days in 1897, 5,726 inches on 18 days in 1896, 3,699 inches on 16 days in 1895, 3,805 inches on 19 days in 1894, and 1,290 inches on 15 days in 1893. Of the total rainfall, 1,150 inches fell on the 11th, and 725 inch on the 26th. The total fall since January 1 has been 22,990 inches on 100 days, compared with 14,645 inches on 94 days in 1898, 19,750 inches on 116 days in 1897, 13,062 inches on 77 days in 1896, 17,950 inches on 83 days in 1895, 21,458 inches on 115 days in 1894, and 18,066 inches on 90 days in 1893.

At Clonkevin, Killiney, Co. Dublin, the rainfall in July was 3,68 inches on 17 days, compared with a fourteen years' average of 2,940 inches on 15.2 days. On the 11th the rainfall was 1.23 inches. In July, 1898, .840 inch fell on 7 days; in 1897 1.28 inches fell on 10 days; in 1896 6.72 inches on 20 days; in 1895 3.58 inches on 17 days; in 1894 4.06 inches on 23 days; in 1885 only .76 inch on 9 days. Since January 1, 1899, 17.10 inches of rain have fallen on 106 days at this station.

At the National Hospital for Consumption, Newcasle, Co. Wicklow, the rainfall was 3,232 inches on 13 days, compared with 1,380 inches on 6 days in July, 1898, and 1,423 inches on 11 days in July, 1897, 1,063 inches being measured on the 11th, and .940 inch on the 26th. At this Second Order Station 21,871 inches of rain have fallen on 194 days since January 1, 1899. The maximal temperature in the shade in July was 75.0° on the 29th; the minimum was 46.2° on the 13th.

**AUGUST.**—August, 1899, was the hottest experienced for very many years. In Dublin the mean temperature was 63.4°, or 3.7° above the average and 0.6° above that of August, 1893, hitherto the record August as to warmth. It was a month of paradoxes—the rainfall was much in excess, the rainy days were much in defect; the weather was dry, the air was damp; easterly and westerly winds were the most prevalent. In and near Dublin thunderstorms of quite exceptional violence occurred between the 4th and 6th, the thunder and lightning on the night of the 5th being to some observers magnificent, to others appalling. The excessive rainfall accompanying this storm is noteworthy—it amounted to 2.27 inches in Dublin (Fitzwilliam-square). It was the fifth occasion only since 1865—that is, in 35 years—upon which 2 inches have been measured in Dublin at 9 a.m. as the product of the previous 24 hours' precipitation. The previous excessive falls were—August 13, 1874, 2.482 inches; October 27, 1880, 3.736 inches; May 28, 1892, 2.066 inches; and July 24, 1896, 2.030 inches. The "splashes" of rain on the 3rd of the month (.300 inch), the 5th (2.227 inches), and the 31st (.696 inch) contributed 85 per cent. of the entire precipitation, which was 3.784 inches. The measurement on the 5th alone equalled 38 per cent. of the total fall. The amount of cloud was singularly small—only 39.0 per cent.; at 9 a.m. it was 47.4 per cent.; at 9 p.m. it was as low as 30.5 per cent.

In Dublin the arithmetical mean temperature (63.4°) was decidedly above the average (60.7°); the mean dry bulb reading at 9 a.m. and 9 p.m. were 62.2°. In the thirty-four years ending with 1898, August was coldest in 1881 (M. T. = 57.0°), and warmest in 1893 (M. T. = 63.0°). In 1898 the M. T. was 61.4°; in 1879 ("the cold year") it was 57.7°. August, 1899, thus established a record for high temperature.

The mean height of the barometer was 30.070 inches, or 0.178 inch above the corrected average value for August—namely, 29.897 inches. The mercury marked .30.392 inches at 9 a.m. of the 1st, and fell to .29.595 inches at 7 p.m. of the 29th. The observed range of atmospheric pressure was, therefore, .0797 inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 62.2°. It was 11° above the value for July, 1899. Using the formula, Mean Temp. = Min. + (max. - min. × .47), the mean temperature was 63.0°, or 3.7° above the average mean temperature for August, calculated in the same way, in the twenty-five years, 1865-89, inclusive (59.3°). The arithmetical mean of the maximal and minimal readings was 61.4°, compared

with a twenty-five years' average of 50°. This is the highest value for August since the present series of observations was commenced in 1865. On the 28th the thermometer in the screen rose to 77°—wind, S.E.; on the 10th the temperature fell to 49°—wind, E. The minimum on the grass was 44°, also on the 10th.

The rainfall was 3784 inches on 10 days. The average rainfall for August in the twenty-five years, 1865–89, inclusive, was 2625 inches, and the average number of rainy days was 15.5. The rainfall, therefore, was considerably in excess of the average, while the rainy days were much below it. In 1874 the rainfall in August was very large—4465 inches on 18 days; in 1868, also, 4745 inches fell on, however, only 13 days; but the heaviest downpour in August occurred in 1889, when 5747 inches were registered on 22 days. On the other hand, in 1884 only 777 inches was measured on 8 days. In 1898 3450 inches fell on 18 days.

High winds were noted on 9 days, but never attained the force of a gale in Dublin. Thunder occurred on the 5th, 6th, 25th, and 27th. Lightning was seen on the 3rd, 6th, 11th, and 27th. Violent thunderstorms prevailed on the 4th, 5th, and 6th. Temperatures reached 70° in the screen on 18 days. Solar parhelion were seen on the 24th. The atmosphere was foggy on the 3rd, 4th, 7th, 11th, 21st, 22nd, and 28th.

The rainfall in Dublin during the eight months ending August 31st amounted to 18200 inches on 117 days, compared with 16516 inches on 124 days in 1898, 10388 inches on 149 days in 1897, 14464 inches on 120 days in 1896, 9455 inches on 96 days during the same period in 1887, and a twenty-five years' average of 17555 inches on 129-1 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in August was 2640 inches on 11 days, compared with 3185 inches on 18 days in 1898, 6195 inches on 27 days in 1897, and 1245 inches on 14 days in 1896. Of this quantity 1610 inches fall on the 4th. The total fall since January 1 amounts to 25680 inches on 130 days, compared with 17830 inches on 113 days in 1898, 25945 inches on 133 days in 1897, 14327 inches on 91 days in 1896, 22085 inches on 107 days in 1895, 25206 inches on 131 days in 1894, and 16341 inches on 106 days in 1893.

At the National Hospital, Newcastle, Co. Wicklow, the rainfall in August was 1877 inches on 13 days, compared with 3303 inches on 16 days in 1898, 4526 inches on 39 days in 1897, 966 inch being measured on the 5th, and 434 inch on the 3rd. Since January 1, 1899, the rainfall at this Second Order Station has been 23748 inches on 117 days, compared with 20101 inches on 110 days in the first 8 months of 1898. The maximal temperature in the shade was 74° on the 1st; the minimum temperature was 47° on the 16th.

**SEPTEMBER.**—September, 1899, was a month of sharp contrasts as regards temperature—at first it was decidedly warm, afterwards it became still more decidedly cold, so that a minimum of 22° was registered in the screen at Parsonstown on the night of the 29th–30th. The net result was to give a mean temperature for the whole month slightly above the average. For the rest, the month was unsettled and very equably, and showery, blistering westerly and north-westerly winds prevailing almost constantly from the 15th to the 20th, inclusive. At the close night frosts occurred inland, and downpours of rain were generally accompanied by much thunder and lightning. Hail also fell in many places.

In Dublin the arithmetical mean temperature (54°) was slightly above the average (53°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 54°. In the thirty-four years ending with 1898, September was coldest in 1886 and in 1892 (M. T. = 53°), and warmest in 1865 (M. T. = 61°) and in 1898 (M. T. = 60°).

The mean height of the barometer was 29.850 inches, or 0.051 inch below the corrected average value for September—namely, 29.910 inches. The mercury rose to 30.278 inches at 9 a.m. of the 9th, and fell to 29.855 inches at 3 p.m. of the 30th. The observed range of atmospheric pressure was, therefore, 1015 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 54°, or 7° below the value for August, 1899. Using the formula, Mean Temp. =  $M_{\text{av}} + (\max - \min \times .476)$ , the mean temperature was 55.2°, or 0.4° above the average mean temperature for September, calculated in the same way, in the twenty-five years, 1865–89, inclusive (55.3°). The arithmetical mean of the maximal and minimal readings was 56.2°, compared with a twenty-five years' average of 55.8°. On the 4th the thermometer in the screen rose to 71.6°—wind, S.; on the 29th the temperature fell to 39°—wind, W. The minimum on the grass was 22.3°, on the 29th.

The rainfall was 2748 inches, distributed over 21 days. The average rainfall for September in the twenty-five years, 1865–89, inclusive, was 2176 inches, and the average number of rainy days was 14.7. In 1871 the rainfall was very large—4048 inches on, however, only 13 days; in 1896 no less than 5073 inches fell on 23 days, establishing a record rainfall for September. On the other hand, in 1865 only 056 inch was measured on but 3 days.

High winds were noted on 13 days, and attained the force of a gale on six occasions in Dublin—the 18th, 19th, 21st, 22nd, 24th, and 28th. The atmosphere was foggy on the 7th, 25th, and 30th. Solar halos were seen on the 6th and 21st. A thunderstorm occurred on the 30th. Thunder was heard on the 28th. Lightning was seen on the 5th and 29th.

The rainfall in Dublin during the nine months ending September 30th amounted to 20448 inches on 138 days, compared with 10468 inches on 112 days during the same period in 1887, 17968 inches on 137 days in 1898, and a twenty-five years' average of 19734 inches on 142.8 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall was 2410 inches, distributed over 19 days. Of this quantity 1630 inches fall on the 30th. At that station the rainfall since January, 1899, has been 28440 inches on 139 days, compared with 25895 inches on 137 days in 1894, 23665 inches on 117 days in 1895, and 21912 inches on 115 days in 1896, 20570 inches on 158 days in 1897, and 19688 inches on 124 days in 1898.

At Clonsevin, Killiney, Co. Dublin, the rainfall in August was 361 inches on 18 days (the maximal fall in 24 hours being 1.95 inches on the 5th), compared with a fourteen years' average of 2,005 inches on 171 days. In September 304 inches fell at Clonsevin on 20 days. The maximal fall in 24 hours was 1.02 inches on the 30th. On the average of fourteen years the September rainfall at this station has been 1,790 inches on 1228 days. Since January 1, 1890, 2875 inches of rain have fallen at Clonsevin on 139 days. The rainfall in the first nine months of the year at Clonsevin was 2,292 inches on 160 days in 1894, 21.56 inches on 129 days in 1895, 20.50 inches on 129 days in 1896, 22.91 inches on 158 days in 1897, and 18.19 inches on 136 days in 1898.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell in measurable quantity on 12 days to the total amount of 2,411 inches, compared with 3,106 inches on 11 days in the same month of 1897, and 1,991 inches on 13 days in 1898. The maximal fall in 24 hours was 1.13 inch on the 30th. Since January 1, 1899, the rainfall at this Second Order Station has been 28,152 inches on 129 days. The highest temperature in the screen was 71.7° on the 5th; the lowest was 57.9° on the 29th.

At Recess, Co. Galway, the rainfall was 4,673 inches on 26 days, 1,061 inches being measured on the 21st.

OCTOBER.—October, 1899, was a quiet, foggy, but withal fine month. Anticyclonic systems tended to prevail in the British Islands, and so there was a large diurnal range of temperature, cold foggy nights alternating with sunny warm days. The weather broke upon the 24th, and from that date to the end of the month cyclonic conditions prevailed and rain fell frequently, though not heavily, except in the South of England on the 25th and 27th, when 1.32 inches was the measurement in London.

In Dublin the arithmetical mean temperature (50.2°) was slightly above the average (49.7°); the mean dry bulb readings at 9 a.m. and 8 p.m. were 48.5°. In the thirty-four years ending with 1898, October was coldest in 1892 (M. T. = 44.8°) and in 1896 (M. T. = 43.0°). It was warmest in 1876 (M. T. = 53.1°). The M. T. in 1898 was 52.6°.

The mean height of the barometer was 29.022 inches, or 0.182 inch above the corrected average value for October—namely, 29.840 inches. The mercury rose to 30.378 inches at 8 a.m. of the 8th, having fallen to 29.233 inches at 9 a.m. of the 1st. The observed range of atmospheric pressure was, therefore, 1.045 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 48.5°, or 0.4° below the value for September, 1898. The arithmetical mean of the maximal and minimal readings was 50.2°, compared with a twenty-five years' average of 49.7°. Using the formula, Mean Temp. = Min. + ( $\frac{\text{max.} - \text{min.}}{2}$ ) × 48.5, the mean temperature was 49.9°, or 0.4° above the average mean temperature for October, calculated in the same way, in the twenty-five years, 1865-89 inclusive (49.5°). On the 18th the thermometer in the screen rose to 65.1°—wind, W.R.W. The minimum on the grass was 29.4°, also on the 8th. The thermometer did not sink to 32° in the screen, but frost occurred on the grass on 8 nights.

The rainfall was 1,638 inches, distributed over 11 days—the rainfall and the rainy days were decidedly below the average. The average rainfall for October in the twenty-five years, 1865-89, inclusive, was 3,106 inches, and the average number of rainy days was 17.6. In 1890 the rainfall in October was very large—7,388 inches on 15 days. In 1875, also, 7,049 inches fell on 26 days. On the other hand, in 1890 only 639 inch fell on but 11 days; in 1894 only 784 inch on but 14 days; and in 1898 only 456 inch on 15 days. In 1896 the October rainfall was 3,578 inches on 19 days.

Lightning was seen on the night of the 29th. High winds were noted on 8 days, but attained the force of a gale on only one occasion—the 29th. The atmosphere was more or less foggy in Dublin on the 6th, 7th, 8th, 9th, 14th, 17th, 18th, 19th, 20th, 21st, 22nd, 23rd, and 24th. A solar halo appeared on the 18th. Lenticular halos were seen on the 17th and 18th. Hail fell on the 11th.

The rainfall in Dublin during the 10 months ending October 31st amounted to 22,495 inches on 149 days, compared with 12,306 inches on 123 days during the same period in 1887 (the dry year), 22,052 inches on 165 days in 1886, 24,061 inches on 179 days in 1897, 21,347 inches on 151 days in 1898, and a twenty-five years' average of 22,840 inches on 150+ days.

At Knockdrum, Greystones, Co. Wicklow, the rainfall in October amounted to 1,360 inches on 11 days. Of this quantity 320 inch fell on the 1st. From January 1st, 1898, up to October 31st, rain fell at Knockdrum on 150 days to the total amount of exactly 30 inches. In 1898 the rainfall in the corresponding ten months was 17,801 inches on 133 days; in 1894, 32,221 inches on 154 days; in 1897, 32,780 inches on 171 days; and in 1898, 24,177 inches on 140 days.

At Clonsevin, Killiney, Co. Dublin, the rainfall in October was 1.26 inches on 12 days, compared with 710 inch on 14 days in 1898, 6,460 inches on 17 days in 1894, 2,250 inches on 11 days in 1897, 3,530 inches on 18 days in 1898, and a fourteen years' average (1885-1898) of 3,319 inches on 16 days. On the 1st, 30 inch fell. Since January 1, 1898, 2939 inches of rain have fallen at this station on 151 days.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall in October was 1,484 inches on 11 days, compared with 3,175 inches on 13 days in 1897, and 4,385 inches on 17 days in 1898. Of this quantity 321 inch was recorded on the 1st. The highest temperature in the screen was 63.0° on the 18th; the lowest was 55.3° on the 15th. At this Second Order Station the rainfall from January 1 to October 31, inclusive, amounted to 27,648 inches on 140 days, compared with 26,479 inches on 139 days in the corresponding 10 months of 1898.

At Recess, Co. Galway, the rainfall was 3,261 inches on 17 days, 620 inch being registered on the 11th, and 608 inch on the 23rd. On the 30th a hailstorm occurred in the morning and a thunder-storm in the evening.

NOVEMBER.—A record month for warmth—the mean temperature having been  $50.7^{\circ}$ , compared with  $50.3^{\circ}$  in November, 1881, and an average of  $44.7^{\circ}$ . The first half of the month was very stormy, wet and generally unsettled. An anticyclonic or high pressure system held, with but slight interruptions, from the 12th. November was actually warmer by  $0.8^{\circ}$  than October, the mean dry bulb temperature at 9 a.m. and 9 p.m. showing an excess of  $1.1^{\circ}$ , as compared with the previous month. At 11 a.m. of the 3rd a very tempest of wind and rain swept over Dublin from S.W., doing much damage to trees and buildings. The sky was particularly cloudy, especially in the mornings. In London, and over the S. and S.E. of England generally, unusually heavy rains fell during the first ten days.

In Dublin the arithmetical mean temperature ( $50.7^{\circ}$ ) was decidedly above the average ( $44.7^{\circ}$ ) the mean dry-bulb readings at 9 a.m. and 9 p.m. were  $49.6^{\circ}$ . In the thirty-four years ending with 1898, November was coldest in 1878 (M. T. =  $38.2^{\circ}$ ), and in 1879 (M. T. =  $42.2^{\circ}$ ) warmest in 1881, (M. T. =  $50.3^{\circ}$ ). In 1898 the M. T. was  $46.2^{\circ}$ . The present month, therefore, establishes a record for high mean temperature.

The mean height of the barometer was 30.044 inches, or 0.184 inch above the corrected average value for November—namely, 29.860 inches. The mercury rose to 30.697 inches at 9 a.m. of the 17th, and fell to 28.784 inches at 11 a.m. of the 3rd. The observed range of atmospheric pressure was, therefore, 1.913 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was  $49.6^{\circ}$ , or actually  $1.1^{\circ}$  above the value for October, 1898. The arithmetical mean of the maximal and minimal readings was  $50.7^{\circ}$ , compared with a twenty-five years' average of  $44.7^{\circ}$ . On the 6th the thermometer in the screen rose to  $62.2^{\circ}$ —wind, S.S.E. to W.S.W.; on the 19th the temperatures fell to  $38.1^{\circ}$ —wind, W.S.W. The minimum on the grass was  $31.6^{\circ}$ , also on the 19th.

The rainfall was 1.964 inches on 13 days—the rainfall and the rainy days were decidedly below the average. The average rainfall for November in the twenty-five years, 1865-89, inclusive, was 2.452 inches, and the average number of rainy days was 17.0. In 1898 0.459 inches fell on 26 days. On the other hand, the rainfall in 1896 was only .664 inch on 9 days. In 1898 4.485 inches fell on 17 days.

High winds were noted on 16 days, and attained the force of a gale on 7 days—the 3rd, 4th, 7th, 8th, 9th, 10th, and 11th. The atmosphere was more or less foggy in Dublin on the 17th, 18th, and 30th. A lunar halo was seen on the 11th. Hail fell on the 8th and 11th. Lightning was seen on the 7th, 8th, 9th, and 14th.

The rainfall in Dublin during the eleven months ending November 30th amounted to 24.450 inches on 162 days, compared with 15.378 inches on 141 days during the same period in 1887, 27.303 inches on 193 days in 1897, 25.982 inches on 173 days in 1898, and a twenty-five years' average of 25.292 inches on 177.4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in November was 2.885 inches on 12 days. Of this quantity .660 inch fell on the 7th. From January 1, 1898, up to November 30, rain fell at that station on 162 days, and to the total amount of 32.870 inches. The corresponding figures for 1897 were 38.185 inches on 188 days, and for 1898 28.786 inches on 156 days.

At Clonsevin, Killiney, Co. Dublin, 2.99 inches of rain fell on 11 days, compared with a fourteen years' average of 2.920 inches on 170 days. The maximal fall in 24 hours was .77 inch on the 7th. Since January 1, 1898, 27.36 inches of rain have fallen at this station on 162 days. The corresponding figures for 1897 were 28.64 inches on 184 days, and for 1898, 26.77 inches on 178 days.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall in November was 3.189 inches on 12 days. The maximal fall in 24 hours was .696 inch on the 7th. Since January 1, 1898, the rainfall at Newcastle has amounted to 30.832 inches on 152 days. The corresponding figures for 1897 were 31.197 inches on 157 days. On November 28th the screened thermometers at the National Hospital rose to  $50.0^{\circ}$ ; on the 4th they fell to  $39.6^{\circ}$ .

At Rosscar, Co. Galway, the rainfall was 5.974 inches on 23 days, .771 inch being measured on the 6th. There was a brief thunderstorm on the 8th.

DECEMBER—December, 1899, was an unsettled, dull, wet month, of medium temperature, but presenting sharp and sudden extremes of warmth and cold. A continental anticyclone of unusual intensity and persistence was observed after the 6th, the barometer rising at Moscow to 31.25 inches on the 19th. Severe frost accompanied this high pressure system, the thermometer falling to  $6^{\circ}$  at Loughborough in Leicestershire on the morning of the 14th.

In Dublin the arithmetical mean temperature ( $42.0^{\circ}$ ) was slightly above the average ( $41.3^{\circ}$ ); the mean dry bulb readings at 9 a.m. and 9 p.m. were  $40.9^{\circ}$ . In the thirty-four years ending with 1898, December was coldest in 1878 (M. T. =  $32.8^{\circ}$ ) and in 1874 (M. T. =  $36.6^{\circ}$ ); warmest in 1898 (M. T. =  $47.0^{\circ}$ ) and in 1885 (M. T. =  $46.2^{\circ}$ ). December, 1898, established a record for high mean temperature.

The mean height of the barometer was 29.864 inches, or 0.071 inch below the corrected average value for December—namely, 29.873 inches. The mercury rose to 30.468 inches at 9 p.m. of the 2nd, and fell to 28.530 inches at 1 p.m. of the 29th. The observed range of atmospheric pressure was, therefore, 2.139 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was  $40.9^{\circ}$ , or  $8.7^{\circ}$  below the value for November. Using the formula, Mean Temp. =  $\frac{1}{2}(\max. - \min. \times .5)$ , the value was  $42.1^{\circ}$ , or  $0.6^{\circ}$  above the average mean temperature for December, calculated in the same way, in the twenty-five years, 1865-89, inclusive ( $41.3^{\circ}$ ). The arithmetical mean of the maximal and minimal readings was  $42.0^{\circ}$ , compared with a twenty-five years' average of  $41.3^{\circ}$ . On the 6th the thermometer in the screen rose to  $61.0^{\circ}$ —wind, W.N.W. The minimum on the grass was  $25.7^{\circ}$ , on the 27th the temperature fell to  $15.5^{\circ}$ —wind, W.N.W. The minimum on the grass was  $25.7^{\circ}$ .

also on the 27th. There was frost in the screen on 8 days, and 16 days of frost on the grass were recorded.

The rainfall was 3287 inches, distributed over as many as 24 days. The average rainfall for December in the twenty-five years, 1865-89, was 2404 inches, and the average number of rainy days was 160. The rainfall, therefore, and the rainy days were much above the average. In 1876 the rainfall in December was very large—7366 inches on 22 days. In 1883 (which was otherwise a fine and dry year) 4799 inches fell on as many as 27 days. On the other hand, in 1887 only 771 inch was measured on 18 days; in 1885 only 742 inch on 10 days; in 1892 only 705 inch on 10 days; and in 1871 only 797 inch on 15 days. In 1896 1066 inches of rain fell on 21 days.

Lunar halos were seen on the 10th and 15th; solar halos on the 2nd and 13th. High winds were noted on only 7 days, and attained the force of a gale on three occasions—the 16th, 25th, and 30th. The atmosphere was more or less foggy in Dublin on the 2nd, 3rd, 5th, 8th, 7th, 12th, 15th, 18th, 23rd, 27th, and 31st. Snow and sleet fell on the 28th, 30th, and 31st.

The rainfall in Dublin during 1899 amounted to 27737 inches on 185 days, compared with 27048 inches on 194 days in 1898, 23344 inches on 213 days in 1897, 26901 inches on 194 days in 1896, 31242 inches on 196 days in 1895, 29261 inches on 209 days in 1894, only 29493 inches on 174 days in 1893, 25644 inches on 196 days in 1892, 27892 inches on 184 days in 1891, only 18601 inches on 160 days in 1887, and a twenty-five years' average of 27696 inches on 1943 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in December, 1899, was 3806 inches, distributed over 20 days. Of this quantity 350 inch fell on the 28th, and 720 inch on the 11th. From January 1st to December 31st, 1899, rain fell at Knockdolian on 182 days to the total amount of 38690 inches. The corresponding figures for 1894 were 38778 inches on 184 days; for 1895, 35135 inches on 174 days; for 1896, 36102 inches on 169 days; for 1897, 42385 inches on 210 days; and for 1898, 30545 inches on 171 days.

Mr. Robert O'Brien Farlong, M.A., writes—

The rainfall at Clonsevin, Killiney, in December, 1899, was 257 inches on 21 days. The maximal fall in 24 hours was 112 inches on the 28th. The average December rainfall of the fourteen years 1885-98, was 2388 inches on 17 days. The total fall since January 1, 1899, was 3155 inches on 183 days. This is above the average of the fourteen years, (1885-1898) viz., 27696 inches on 180 days. The maximal fall in any month was 861 inches in August, of which 145 inches fell on August 5th, during the progress of a very severe thunderstorm, which lasted from 9 p.m. on August 5th till after 1 o'clock a.m. on August 6th, and reached its greatest violence at 030 a.m. on the 6th. Absolute droughts occurred from May 25th to June 16th, both inclusive (23 days), and from November 15th to November 28th, both inclusive (15 days). Snow fell lightly on March 20th, 21st, and 22nd, but had quite disappeared on March 23rd. Some sleet fell on December 27th, 28th, and 30th. There was very little frost during the year.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell during December on 22 days to the amount of 3367 inches, 315 inch being measured on the 28th, and 760 inch on the 11th. At this Station of the Second Order, the highest temperature in the shade was 59.5° on the 18th; the lowest was 30.0° on the 15th. The rainfall for the year 1899 was 34620 inches on 174 days, compared with 40183 inches on 194 days in 1897, and 33137 inches on 174 days in 1898.

At Reese, Connemara, Co. Galway, December was wet and cold. The rainfall was 9413 inches on 26 days, 1340 inches being measured on the 21st, and 903 inch on the 4th. A severe snowstorm with E.N.E. wind prevailed on the 28th, lasting for 13 hours. The depth of snow on the level was 5 inches; the rainfall measurement was 903 inch.

#### RAINFALL IN 1899, At 40, Fitzwilliam-square, West, Dublin.

\* Maximum.

The rainfall was 041 inch in excess of the average annual measurement of the twenty-five years, 1885-89, inclusive—viz., 27696 inches.

It is to be remembered that the rainfall in 1887 was very exceptionally small—16601 inches, the only approach to this measurement in Dublin being in 1870, when only 20487 inches fell, in 1884, when the measurement was 20487 inches, and in 1893 with its rainfall of 20483 inches. In seven of the twenty-five years in question the rainfall was less than 26 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 32.466 inches—or as nearly as possible double the fall of 1887—fell on 220 days. Only twice since these records commenced has the rainfall in Dublin exceeded that of 1886—namely, in 1872, when 35.566 inches fell on 238 days, and in 1880, when 34.512 inches were measured on, however, only 188 days.

In 1899 there were 186 rainy days, or days upon which not less than .005 inch of rain (five-thousandths of an inch) was measured. This was distinctly below the average number of rainy days, which was 194.3 in twenty-five years, 1865–89, inclusive. In 1868 and 1887—the warm, dry years of recent times—the rainy days were only 180, and in 1879 they were only 145.

The rainfall in 24 hours, from 9 a.m. to 9 a.m., exceeded one inch on 4 occasions in 1899—namely, July 11th (1.402 inches); August 5th (2.227 inches); September 30th (1.042 inches); and December 28th (1.129 inches). In 1892 the daily rainfall twice exceeded 1 inch—viz., May 28th, (2.054 inches) and August 16th (1.810 inches). On no occasion in 1893 did one inch of rain fall on a given day in Dublin. In 1894 falls of upwards of an inch of rain in 24 hours were recorded on four occasions—viz., May 15th (1.899 inches); July 24th (1.560 inches); August 26th (1.866 inches); and October 23rd (1.042 inches). In 1895, 1.102 inches fell on January 12th; 1.014 inches on July 24th; and 1.256 inches on July 25th. In 1896, 1.563 inches fell on July 8th; 2.020 inches on July 24th; and 1.288 inches on December 8th. In 1897, 1.186 inches fell on September 1st. In 1898, on November 23rd, 1.732 inches were measured. The excessive rainfall accompanying the thunderstorm of August 5th and 6th in Dublin is noteworthy—it amounted to 2.227 inches in Dublin (Fitzwilliam-square). It was the fifth occasion only since 1865—that is, in 35 years—upon which 2 inches have been measured in Dublin at 9 a.m. as the product of the preceding 24 hours' precipitation. The previous excessive falls were—August 18th, 1874 (2.462 inches); October 27th, 1889 (2.736 inches); May 25th, 1892 (2.056 inches); and July 24th, 1896 (2.020 inches).

Included in the 186 rainy days in 1899 are 13 on which snow or sleet fell, and 15 on which there was hail. In January and in February hail was observed on 1 day, in March on 5 days, in April on 3 days, in May, June, and October, on 1 day, and in November on 2 days. Snow or sleet fall on 3 days in January, 1 day in February, 5 days in March, 1 day in April, and on 3 days in December. Thunderstorms occurred once in April, June, July, and September, and 3 times in August. Thunder alone also occurred once in May, July, and September; 4 times in August. Lightning was also seen twice in February, once in June and October, twice in September, and four times in August and November.

The rainfall in the first six months was 11.205 inches on 95 days. The rainfall exceeded 3 inches in July (3.121), August (3.784), and December (3.287). In March it was only .911 inch on 12 days.

The rainfall was distributed as follows:—5.612 inches fell on 51 days in the first quarter, 5.733 inches on 44 days in the second, 9.638 inches on 43 days in the third, 6.789 inches on 48 days in the fourth and last quarter.

More or less fog prevailed on 71 occasions—10 in January, 7 in February, 4 in March, 4 in April, 3 in May, 1 in June, 5 in July, 7 in August, 3 in September, 13 in October, 3 in November, and 11 in December. High winds were noted on 112 days—18 in January, 12 in February, 9 in March, 10 in April, 6 in May, 3 in June, 5 in July, 5 in August, 13 in September, 8 in October, 16 in November, and 8 in December. The high winds amounted to gales (force 7 or upwards according to the Beaufort scale) on 38 occasions—8 in January, 5 in February, 2 in March, 5 in April, 1 in July, 6 in September, 1 in October, 7 in November, and 3 in December.

Abstract of Meteorological Observations taken at Dublin (60, Fitzwilliam-square, West), during the Year 1899.

NOTE.—The observations in the first three years were recorded by Mr. Hermann, and were published in "Notes on the Weather," 1880, 1881, and 1882.

The observations in the last three years were recorded by Mr. Morse, and were published in "Notes on the Weather," 1883, 1884, and 1885.

TABLE showing the Monthly and Yearly Rainfall at Dublin during the Twenty-one Years 1879 to 1899, inclusive; with the Means for the Twenty Years 1879 to 1898.

DUBLIN CASTLE,

24th July, 1900.

Sir,

I have to acknowledge the receipt of your letter of the 23rd instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Thirty-sixth Annual Report of Marriages, Births, and Deaths, Registered in Ireland during the Year 1899.

I am,

Sir,

Your obedient Servant.

J. B. DOUGHERTY.

The Registrar-General,  
Chancery House,  
Rutland Square.
